Complex Methods For Partial Differential Equations:

Complex Methods for Partial Differential Equations Heinrich Begehr, A. Okay Celebi, W. Tutschke, 2013-12-01 This volume is a collection of manuscripts mainly originating from talks and lectures given at the Workshop on Recent Trends in Complex Methods for Partial Differential Equations held from July 6 to 10 1998 at the Middle East Technical University in Ankara Turkey sponsored by The Scientific and Technical Research Council of Turkey and the Middle East Technical University This workshop is a continuation of two workshops from 1988 and 1993 at the International Centre for Theoretical Physics in Trieste Italy entitled Functional analytic Methods in Complex Analysis and Applications to Partial Differential Equations Since classical complex analysis of one and several variables has a long tradition it is of high level But most of its basic problems are solved nowadays so that within the last few decades it has lost more and more attention The area of complex and functional analytic methods in partial differential equations however is still a growing and flourishing field in particular as these methods are not only applied Within the framework of holomorphic functions but are also combined with properties of generalized analytic functions This can be seen by the many books which recently were published in this field and also by the proceedings in this ISAAC series and the ISAAC congresses and workshops Complex Analytic Methods for Partial Differential Equations Heinrich G. W. Begehr, 1994 This is an introductory text for beginners who have a basic knowledge of complex analysis functional analysis and partial differential equations Riemann and Riemann Hilbert boundary value problems are discussed for analytic functions for inhomogeneous Cauchy Riemann systems as well as for generalized Beltrami systems Related problems such as the Poincaré problem pseudoparabolic systems and complex elliptic second order equations are also considered Estimates for solutions to linear equations existence and uniqueness results are thus available for related nonlinear problems the method is explained by constructing entire solutions to nonlinear Beltrami equations Often problems are discussed just for the unit disc but more general domains even of multiply connectivity are involved

Complex Methods on Partial Differential Equations Claudio I. Withalm, 1989 Methods of Complex Analysis in Partial Differential Equations with Applications Manfred Kracht, Erwin Kreyszig, 1988 This book is devoted to the development of complex function theoretic methods in partial differential equations and to the study of analytic behaviour of solutions It presents basic facts of the subject and includes recent results emphasizing the method of integral operators and the method of differential operators The first chapter gives a motivation for and the underlying ideas of the later chapters Chapters 2 to 7 give a detailed exposition of the basic concepts and fundamental theorems as well as their most recent development Chapters 8 to 13 are concerned with the application of the theory to three important classes of differential equations of mathematical physics Functional Analytic Methods In Complex Analysis And Applications To Partial Differential Equations A S A Mshimba, Wolfgang Tutschke, 1995-10-17 These

proceedings concentrate on recent results in the following fields of complex analysis complex methods for solving boundary value problems with piecewise smooth boundary data complex methods for linear and nonlinear differential equations and systems of second order and applications of scales of Banach spaces to initial value problems Some problems in higher dimensions such as the unification of global and local existence theorems for holomorphic functions and an elementary approach to Clifford analysis are also discussed Particular emphasis is placed on Symbolic Computation in Complex Analysis and on the new approaches to teach mathematical analysis based on interactions between complex analysis and partial differential equations
