

so on. You'll also learn to appropriately incorporate sources into your compositions, both to bolster your ethos and to signal the conversation(s) in which you're taking part.

### **The Recursive Steps of the Research Process**

Composers do research for two equally important reasons: to discover the conversation and to clarify their position. While many beginning composers treat research as a "one and done" linear procedure, experienced researchers know that research and composing is a continuous, recursive process involving multiple steps.

#### **1. Brainstorm initial research questions.**

Effective research starts from sincere questioning – that is, you shouldn't already know what you want to argue before you begin the research process. Too often, beginning composers fall into the trap of only looking for sources that support what they already believe. This is a dishonest approach, since it avoids a true process of inquiry. As philosopher Friedrich Nietzsche said in his essay "On Truth and Lying in an Extra-Moral Sense," "When someone hides something behind a bush and looks for it again in the same place and finds it there as well, there is not much to praise in such seeking and finding." In other words, trying to find only what you think or know is already there won't help anyone very much. So instead of, say, looking for sources that can give you "quotes" to support your already-formed position on wolf population management, you might approach it by asking questions that you don't already know the answer to: maybe "what are different theories about the benefits of wolf reintroduction?", or "What are the costs and benefits of wolf reintroduction to various populations in the West?"

Even if you do have strong opinions about a topic, it's best to approach the research process with a sincere, open mind that seeks to really understand an issue or topic. Initial research questions are best if they're simple and open-ended. Once you start generating and reading through sources, your question will become more refined and specific.

Let's say that for a video editorial assignment, you want to investigate the differences between online and face-to-face education. The president of your university has just announced that she wants to increase enrollment by 25%, and with limited physical facilities, most campus administrators and faculty agree that the most logical way to achieve this goal is to increase the number of online courses and degrees. Though you've taken a few online courses (with mixed results), you're uneasy about the implications of this move by the university, and want to understand more about the effectiveness of online learning before weighing in on the issue.

Some initial questions about online education (generated with the stasis questions – see Chapter XX [on rhetorical arguments]) might look something like this:

- What are the trends in online learning? What percentage of all college and university courses are offered online, and is this number growing, shrinking, or has it leveled off?
