Comparative Physiology Primitive Mammals:

Comparative Physiology, Primitive Mammals Knut Schmidt-Nielsen, 1980
Schmidt-Nielsen, 1980 **Comparative Physiology: Primitive Mammals**, 1980 **Comparative Physiology** C. Richard Taylor, 1980 **The Evolution of Air Breathing in Vertebrates** David J. Randall, 1981-02-27 First published in 1981 this book presents an original approach to the evolution of air breathing in vertebrates from aquatic ancestors **Great Transformations in Vertebrate Evolution** Kenneth P. Dial, Neil Shubin, Elizabeth L. Brainerd, 2015-07-20 How did flying birds evolve from running dinosaurs terrestrial trotting tetrapods from swimming fish and whales return to swim in the sea These are some of the great transformations in the history of life events that have captured the imagination of scientists and the general public alike At first glance these major evolutionary events seem utterly impossible The before and after look so fundamentally different that the great transformations of the history of life not only seem impossible but unknowable The 500 million year history of vertebrates is filled with change and as a consequence every living species contains within its structure DNA and fossil record a narrative of them A battery of new techniques and approaches from diverse fields of inquiry are now being marshaled to explore classic questions of evolution These approaches span multiple levels of biological organization from DNA sequences to organs to the physiology and ecology of whole organisms Analysis of developmental systems reveals deep homologies of the mechanisms that pattern organs as different as bird wings and fish fins Whales with legs are one of a number of creatures that tell us of the great transformations in the history of life Expeditions have discovered worms with a kind of head fishes with elbows wrists and necks feathered dinosaurs and human precursors to name only a few Indeed in the last 20 years paleontologists have discovered more creatures informative of evolutionary transitions than in the previous millennium The Great Transformations captures the excitement of these new discoveries by bringing diverse teams of renowned scientists together to attack particular transformations and to do so in a contents organized by body part head neck fins limbs and then the entire bauplan It is a work that will transform evolutionary biology and paleontology **Mammals of Africa: Volume IV** Jonathan Kingdon, 2014-11-20 A major new series of handbooks **Life in the Cold** Gerhard Heldmaier, Martin F. Bach, Susanne Klaus, 2013-06-29 This book contains the proceedings of the 11th international symposium dedicated to the understanding of animal Life in the Cold held at Jungholz Austria August 13-18 2000 In 55 chapters contributed by researchers from 16 countries the current state of knowledge is reviewed and the most recent developments and discussions in this field are highlighted The first symposium on hibernation and life in the cold was held in 1959 and from then on they continued to occur every 3-5 years The regular occurrence of these meetings became almost a tradition A tradition which is entirely based on the enthusiasm of participants and was nourished by scientific progress in this area during the past decades The first symposium in 1959 was organised by Charles P Lyman and Albert R Dawe and was almost entirely dedicated to hibernation and torpor This has been a backbone topic of the following symposia

although other aspects of animal energetics thermal physiology and biochemistry were included in later meetings

Mammals of Africa Jonathan Kingdon, David Happold, Thomas Butynski, Michael Hoffmann, Meredith Happold, Jan Kalina, 2013-05-23 WINNER OF THE 2014 DARTMOUTH MEDAL AWARDED BY THE AMERICAN LIBRARY ASSOCIATION *Mammals of Africa* represents a high water mark not just in mammalogy but in scientific publishing overall Magnificent Tim Flannery Macquarie University Sydney *Mammals of Africa* MoA is a series of six volumes which describes in detail every currently recognized species of African land mammal This is the first time that such extensive coverage has ever been attempted and the volumes incorporate the very latest information and detailed discussion of the morphology distribution biology and evolution including reference to fossil and molecular data of Africa's mammals With 1 160 species and 16 orders Africa has the greatest diversity and abundance of mammals in the world The reasons for this and the mechanisms behind their evolution are given special attention in the series Each volume follows the same format with detailed profiles of every species and higher taxa The series includes some 660 colour illustrations by Jonathan Kingdon and his many drawings highlight details of morphology and behaviour of the species concerned Diagrams schematic details and line drawings of skulls and jaws are by Jonathan Kingdon and Meredith Happold Every species also includes a detailed distribution map Extensive references alert readers to more detailed information

Ecotoxicology of Wild Mammals Richard F. Shore, Barnett A. Rattner, 2001-04-25 This landmark book which contains

contributions from the world's foremost mammalian ecotoxicologists is a truly impressive summary of research undertaken in this field in recent years. It is also the first book to draw such information together in a seamless and unified approach. In examining the exposure and effects of environmental contaminants in wild mammal populations, this book addresses four core questions: What exactly do we know about environmental contaminants in wild mammals? What are the commonalities and differences between mammal orders/species in the effects that contaminants have? How and to what degree of accuracy can we predict the adverse effects of environmental contaminants on mammalian wildlife? How significant are contaminant insults compared with other density-independent and dependent factors such as habitat loss, climatic factors, and disease? The key underlying scientific principles and issues raised by the team of international authors will have significance throughout the world, making this an invaluable book not only for all those studying the effects of environmental pollutants on mammals but also on regulatory agencies and those carrying out environmental impact assessment.

General Zoology Claude Alvin Villet, Warren Franklin Walker, Robert D. Barnes, 1984. Synthesizes the factual and theoretical knowledge comprising modern zoology into a clear and concise text. Bibliography.

Vertebrate Reproduction E. W. Jameson, 1988-10-28. This text reference presents a unified treatment of vertebrate reproductive physiology and sexual interactions in the context of environmental responses. Stresses the ecology and evolution of wild species, integrating biochemical and genetic mechanisms with behavioral and environmental influences. Addresses sex determination, growth and development, parental care, fecundity, and seasonality. Presents results of many experimental studies and observations made in the wild. In addition to having a large number of citations (over 1400), this book is unique in its broad coverage and in its effort to explain ecology and evolution in terms of known physiological processes.

Advances in Physiological Research International Union of Physiological Sciences. Congress, H. McLennan, 1987-07-31. The XXX Congress of the International Union of Physiological Sciences took place in Vancouver, Canada, in July 1986, and this volume contains a selection of the Review Lectures which formed part of the Congress programme. They cover most of the areas of contemporary physiology and were presented by distinguished scientists from many parts of the world. An innovation at this Congress was the inclusion in the programme of a number of lectures devoted to historical subjects. These lectures attracted large audiences at the meetings, and three of them also appear in this book. Finally, the Plenary Lectures which formed part of the opening and closing ceremonies and which deal with some aspects of Canadian physiological history find a place here as well. The Editors are grateful to all of the authors who provided the manuscripts which go to make up this book, and to John Donald for his invaluable assistance in the preparation of the final text, as well as of course to all of the contributors whose participation made the Congress the success which it was. It is hoped that this volume will provide a useful memento of the event.
