Comparative Resource Allocation:

Comparative Resource Allocation Alexander J. Groth, Larry L. Wade, 1984-10-01 How a nation's resources are allocated who gets what and why is inextricably linked to the politics and political system of that nation The distribution of such resources has undeniable consequences for national social welfare Taking a comparative approach to analyzing such issues as industrial performance quality of life and national security the contributors to this volume examine the resource allocation processes of a wide range of nation states

Optimal Resource Allocation for SQM Harjit Kaur,2020 The allocation of scarce resources forms the core of modern economies but the focus of strategic management literature is more on a narrower challenge of appropriate allocation of resources for corporate strategy The soft element and hard element of total quality management may be classified into three types of resources namely Human Resources HR Organizational Resources OR and Technological Resources TR The objective of the current paper is to optimally allocate the three resources for implementing the selected 10 quality strategies of Strategic Quality Management SQM A case study approach is used here based on the premise that resource allocation activity is unique to every organization A combined Analytic Network Process ANP Goal Programming GP operations research technique is used for optimal allocation of resources Here the gap between desired and actual resource allocation is assessed using ANP technique and GP is used for optimal allocation of resources Both the techniques are operation research techniques and do not require a large sample size The data is collected using Saaty s 1999 9 point paired comparison scale from respondents three respondents per company employed in two pharmaceutical companies The results of ANP concluded that some of the quality strategies were over resourced while others were under resourced in both the companies The output of ANP was used as an input for GP and the results propose an optimal reallocation of three resources for the selected quality strategies of SQM
