
Compiled Labelled Deductive Systems for Access Control

KRYSIA BRODA AND ALESSANDRA RUSSO

ABSTRACT. This paper proposes a Compiled Labelled Deductive System, called *AC_{CLDS}*, for reasoning about role-based access control in distributed systems, which builds upon Massacci's tableau system for role-based access control. The *AC_{CLDS}* system overcomes some of the limitations of Massacci's approach by combining its multi-modal propositional language with a labelling algebra that allows reasoning explicitly about *dynamic properties* of the accessibility relations. This combined feature, which is typical of the Compiled Labelled Deductive framework, facilitates a sound and complete, and more natural *AC_{CLDS}* reasoning mechanism than Massacci's sound and only partially complete tableau system. Limitations of the usefulness of Massacci's multi-modal logic in formalising access control systems are also discussed, showing that they relate to the initial formulation of Abadi's calculus for access control. Solutions for overcoming these limitations are briefly proposed within the context of the *AC_{CLDS}* system.

1 Introduction

Labelled Deductive Systems (LDS) is a methodology initially proposed by Gabbay in [18] for both the theoretical study of logics and the development of logical systems suitable for the needs of specific applications. In the LDS approach, a basic unit of information is not just a formula but a *labelled formula*, where the label belongs to a given labelling algebra. Additional information, for example regarding the overall structure of the data or the underlying semantic properties of the logic, can be explicitly embodied, via the labels, in the object language of the system. Derivation rules act on both the labels and the formulae, according to certain fixed rules of propagation. The addition of this separate "object-level" dimension (i.e. labels and labelling algebra) enables the development of a *uniform* system

Compiled Labelled Deductive Systems:

Compiled Labelled Deductive Systems Krystia Broda, 2004 This book introduces a general framework called Compiled Labelled Deductive System CLDS for a unified presentation of logics It shows how this technique is applied to various families of non classical logics widely used in Computer Science and Artificial Intelligence It includes complete natural deduction proof systems together with proofs and examples for the families of propositional and predicate modal logics propositional conditional logics of normality multiplicative linear logic and for Lukasiewicz fuzzy logic The CLDS framework generalises the notion of a logical theory to a structured theory consisting of labelled formulas and relations between the labels This formalisation makes the logics more amenable to applications Moreover the framework provides a semantic approach based on a first order translation which can be uniformly applied to any logic whose semantics is first order axiomatisable Such a semantic approach also facilitates the development of automated theorem provers for non classical logics

Labelled Deductive Systems Dov M. Gabbay, 2023 This work introduces a new unifying framework for logics which makes it particularly suitable for applications It develops its general theory and illustrates it with applications in logic computer science artificial intelligence and philosophy

Labelled Deduction David Basin, M. D'Agostino, Dov M. Gabbay, Seán Matthews, Luca Viganò, 2012-12-06 Labelled deduction is an approach to providing frameworks for presenting and using different logics in a uniform and natural way by enriching the language of a logic with additional information of a semantic proof theoretical nature Labelled deduction systems often possess attractive properties such as modularity in the way that families of related logics are presented parameterised proofs of metatheoretic properties and ease of mechanisability It is thus not surprising that labelled deduction has been applied to problems in computer science AI mathematical logic cognitive science philosophy and computational linguistics for example formalizing and reasoning about dynamic state oriented properties such as knowledge belief time space and resources

Labelled Non-Classical Logics Luca Viganò, 2013-04-17 I am very happy to have this opportunity to introduce Luca Viganò's book on Labelled Non Classical Logics I put forward the methodology of labelled deductive systems to the participants of Logic Colloquium 90 Labelled Deductive systems a Position Paper In J Oikkonen and J Vaananen editors Logic Colloquium 90 Volume 2 of Lecture Notes in Logic pages 66 68 Springer Berlin 1993 in an attempt to bring labelling as a recognised and significant component of our logic culture It was a response to earlier isolated uses of labels by various distinguished authors as a means to achieve local proof theoretic goals Labelling was used in many different areas such as resource labelling in relevance logics prefix tableaux in modal logics annotated logic programs in logic programming proof tracing in truth maintenance systems and various side annotations in higher order proof theory arithmetic and analysis This widespread local use of labels was an indication of an underlying logical pattern namely the simultaneous side by side manipulation of several kinds of logical information It was clear that there was a need to establish the labelled deductive systems methodology Modal logic is one major area where

labelling can be developed quickly and systematically with a view of demonstrating its power and significant advantage In modal logic the labels can play a double role *Automated Reasoning with Analytic Tableaux and Related Methods* Neil V.
