Competitive Manufacturing Thomas J. Sowell, 2005-07

Some of the experts claim that America manufacturing has lost its competitive edge They believe the U S cannot compete with other countries that have less expensive labor rates They claim the industry is reaching a point of obsolescence and fading into the horizon just like the horse and buggy did They also believe that eventually the number of manufacturing workers will shrink to less than 2% of the total workforce similar to the transformation that occurred when the agricultural industry dissipated during the years of the Industrial Revolution And still others state that manufacturing will never regain the glory days it enjoyed for 35 years following the Second World War It is no wonder that the manufacturing industry has such a pessimistic view of itself The irony of it all is that the sector has actually been quite successful over the past twenty years A point of great importance as to why the nations manufacturing sector has been successful it that it is continually learning how to compete against low wage overseas competition by discovering how to be more productive achieving greater efficiencies of scale and implementing various management techniques While the early 1980 s did introduced foreign competition at a rapid pace as many manufactures witnessed their market share erode almost overnight that decade did initiate a wake up call for many manufacturers both large and small The message became abundantly clear either change and meet the competition head on with new production methods and management techniques and conduct your organization under a different business model or become obsolete That said it should also be recognized that the manufacturing sector would always experience cyclical periods of economic expansion and volatile contraction In the expansion mode

manufacturing can create unprecedented wealth and prosperity In the contraction mode it can create a feeling of doom It is understandable that the feeling of disbelief can set in whenever economic downturns occur causing widespread job layoffs and losses But the American manufacturing sector continues to demonstrate strong resilience and has many reasons to be proud In retrospect it has always made a continuous and steady climb back to prominence after every economic recession since 1945 And whenever manufacturing industries flex their powerful muscle during economic expansion periods the benefits and rippling effect are felt throughout several other sectors of the economy One of the premier reasons for improving manufacturing efficiency is the creation economic wealth Manufacturing still contributes a substantial part of the gross domestic product of modern industrialized nations Yet even with that stated it is often considered as a highly productive activity that can always be improved upon This book offers techniques for implementing method improvements and other planning strategies that will provide the opportunities to allow manufacturing efficiency to be a creator of economic wealth These strategies are ever more paramount today than in years past and they will continue to be more significant in the future

Strategic Manufacturing Management Thomas J. Sowell, 2006-02-28 The economic interdependence among developing and established industrialized nations and the disintegration of barriers to the flow of capital information and technology across national borders facilitates international market integration and globalization These market conditions force manufacturing companies to seriously consider the strategies they need to implement if they are to develop competitive advantages Very often the strategies that are executed will result in a sustained competitive advantage through which a firm becomes leaner more flexible and more focused on providing cost effective goods and services to sophisticated customers This book provides manufacturing business strategies to assist companies to meet those requirements

Competitive Manufacturing Stuart A. Rosenfeld, 2017-07-12 Stuart A Rosenfeld presents a timely analysis of the problems the United States and other industrialized countries face as they adjust from economies based on natural resources and goods to economies based on quality of human resources and high performance market oriented organizations Some of the questions raised include Will American industry successfully face the competitive challenge of the global economy Can US manufacturing raise productivity and innovate enough to remain healthy Have the latest advances in process technology and management practice penetrated the rural industrial base How can public policy help improve the competitiveness of the crucial manufacturing sector This book challenges the conventional wisdom in economic development policy Past state and local industrial policy focused on locational decisions not on issues of competitiveness Building the competitive advantage of industry is more important than promoting the competitive advantages of location Incentives to modernize are more important than subsidies to locate Competitive Manufacturing uses the rural South the most industrialized rural region of the nation to examine the strengths and weaknesses of manufacturing as the basis for economic growth Using historical analysis surveys and intensive case studies the author analyzes the technological capabilities of rural manufacturing the factors that influence the decision to modernize and the effects of technology on education and work Comparative studies in Denmark and Italy point to new directions for US economic development policy
