

# What Is Blindsight?

Conscious vision in humans depends on a region of the brain called the primary visual cortex (*below*). Damage there causes blindness in corresponding areas of the visual field. "Blindsight" occurs when patients respond in some way to an item displayed in their blind area, where they cannot consciously see it. In a dramatic demonstration of the phenomenon, a patient called "TN" navigated an obstacle course despite his total blindness (*right*).

## VISUAL PATHWAYS

Signals from the retina go to the primary visual cortex via the lateral geniculate nucleus in the midbrain and ultimately to higher areas for conscious processing. Nerves also send visual information to areas such as the pulvinar nucleus and superior colliculus in the midbrain. Those areas do not seem to produce any conscious vision, but some must underlie blindsight.
