*Computational Statistics in the Earth Sciences* Alan D. Chave, 2017-10-19 Based on a course taught by the author this book combines the theoretical underpinnings of statistics with the practical analysis of Earth sciences data using MATLAB The book is organized to introduce the underlying concepts and then extends these to the data covering methods that are most applicable to Earth sciences Topics include classical parametric estimation and hypothesis testing and more advanced least squares based nonparametric and resampling estimators Multivariate data analysis not often encountered in introductory texts is presented later in the book and compositional data is treated at the end Datasets and bespoke MATLAB scripts used in the book are available online as well as additional datasets and suggested questions for use by instructors Aimed at entering graduate students and practicing researchers in the Earth and ocean
