Bridge Play Technique:

Knowledge-Free and Learning-Based Methods in Intelligent Game Playing Jacek Mandziuk, 2010-01-27 The book is focused on the developments and prospective challenging problems in the area of mind game playing i.e. playing games that require mental skills using Computational Intelligence (CI) methods mainly neural networks, genetic evolutionary programming and reinforcement learning. The majority of discussed game playing ideas were selected based on their functional similarity to human game playing. These similarities include learning from scratch, autonomous experience based improvement and example based learning. The above features determine the major distinction between CI and traditional AI methods relying mostly on using effective game tree search algorithms, carefully tuned hand crafted evaluation functions or hardware based brute force methods. On the other hand, it should be noted that the aim of this book is by no means to underestimate the achievements of traditional AI methods in game playing domain. On the contrary, the accomplishments of AI approaches are undisputable and speak for themselves. The goal is rather to express my belief that other alternative ways of developing mind game playing machines are possible and urgently needed.

Playing a Suit Contract Ken Casey, 2015-11-18 The book is designed to give a comprehensive and systematic view of the rules of play for suit contracts. Woven Arch Bridge LIU Yan, 2020-11-30 This book focuses on the woven arch bridge, an arch shaped structure that is one of the most extraordinary timber building traditions of the world. The woven arch bridge exists widely in different cultures and its specific nature is conceptualized by the author as a kind of universal uniqueness. Challenging widespread viewpoints on its origin and genealogy, taking this argument as its main thread, the book traces the

histories of different woven arch bridge cultures and investigates in particular the woven arch bridge in the mountains of Southeast of China from three angles using both archaeological and anthropological methods Resting upon these case studies a definition of typology and a new theory of structural evolution are established while the book also draws comparisons between western and eastern timber building cultures and offers new insights on the differences between East Asia and Europe The book also provides a large number of examples and illustrations of the bridge and will be of great value and inspiration for architects and scholars studying the history of architecture bridges and construction while also appealing to general readers interested in historical bridges and traditional construction technology
