

INTRODUCTION

- Jean Piaget (1896-1980) was one of the 20th century's most influential researchers in the area of developmental psychology.
- He originally trained in the areas of biology and philosophy and considered himself a "genetic epistemologist." (genetic= development, epistemology = study of knowledge)
- Piaget wanted to know how children learned through their development in the study of knowledge.
- Piaget's theory is based on the idea that the developing child builds cognitive structures (schemes used to understand and respond to physical environment).
- He believed the child's cognitive structure increased with development.
- based on his observations of his own three children.
