Matlin, Jane Maienschein, Manfred D. Laubichler, 2018-01-19 Although modern cell biology is often considered to have arisen following World War II in tandem with certain technological and methodological advances in particular the electron microscope and cell fractionation its origins actually date to the 1830s and the development of cytology the scientific study of cells By 1924 with the publication of Edmund Vincent Cowdry s *General Cytology* the discipline had stretched beyond the bounds of purely microscopic observation to include the chemical physical and genetic analysis of cells Inspired by Cowdry s classic watershed work this book collects contributions from cell biologists

historians and philosophers of science to explore the history and current status of cell biology Despite extraordinary advances in describing both the structure and function of cells cell biology tends to be overshadowed by molecular biology a field that developed contemporaneously This book remedies that unjust disparity through an investigation of cell biology s evolution and its role in pushing forward the boundaries of biological understanding Contributors show that modern concepts of cell organization mechanistic explanations epigenetics molecular thinking and even computational approaches all can be placed on the continuum of cell studies from cytology to cell biology and beyond The first book in the series Convening Science Discovery at the Marine Biological Laboratory Visions of Cell Biology sheds new light on a century of cellular discovery
