the challenge of developing efficient representations for dynamic 3D scenes and multiple 3D modalities Section III Robust 3D Deep Learning presents methods for improving the robustness and reliability of deep learning models in real world applications Section IV Resource Efficient 3D Deep Learning explores ways to reduce the computation cost of 3D models and improve their efficiency in resource limited environments Section V Emerging 3D Deep Learning Applications showcases how 3D deep learning is transforming industries and enabling new applications for healthcare and manufacturing This collection is a valuable resource for researchers and practitioners interested in exploring the potential of 3D deep learning

*Value and Reward Based Learning in Neurobots* Jeffrey L Krichmar, Florian Röhrbein, 2015-03-05 Organisms are equipped with value systems that signal the salience of environmental cues to their nervous system causing a change in the nervous system that results in modification of their behavior These systems are necessary for an organism to adapt its behavior when an important environmental event occurs A value system constitutes a basic assumption of what is good and bad for an agent These value systems have been effectively used in robotic systems to shape behavior For example many robots have used models of the dopaminergic system to reinforce behavior that leads to rewards Other modulatory systems that shape behavior are acetylcholine s effect on attention norepinephrine s effect on vigilance and serotonin s effect on impulsiveness mood and risk Moreover hormonal systems such as oxytocin and its effect on trust constitute as a value system This book presents current research involving neurobiologically inspired robots whose behavior is 1 Shaped by value and reward learning 2 adapted through interaction with the environment and 3 shaped by extracting value from the environment
