Abstract: Older people have been disproportionately affected by the COVID-19 pandemic and are often portrayed as passive victims of this global health crisis. However, older adults do take responsibility for their own health and that of others in large part through social network dynamics. The purpose of this study was to understand the processes whereby older adults' social networks shape their own health behaviors, and vice versa, in the context of COVID-19 vaccination and other mitigation efforts. Qualitative data from 77 older adults between ages 65 and 94 obtained through focus groups or individual interview participants were analyzed. Participant narratives demonstrated the reciprocal nature of social support and health behaviors and provided evidence that COVID-19-related health behaviors in this population were motivated by social support, altruism, and life experience. These findings emphasize older adults' active role as health promoters in their families and communities, keeping themselves and their significant others safe from COVID infection. Implications for the role of older adults in community health promotion efforts are discussed.

1. Introduction

Since the beginning of the COVID-19 pandemic, people have been talking about aging and older people in terms of risk of infection, disease severity, hospitalization, and risk of death. Some have pointed to age as a risk for severe COVID outcomes [1], with the initial outbreaks of COVID-19 infections in older adult congregate settings undoubtedly reinforcing this narrative [2]. More accurately, the risk of poor COVID outcomes is associated with underlying intrinsic and extrinsic age-associated factors that contribute to infection and disease progression. These factors include: immunosenescence, higher rates of comorbid conditions (i.e., hypertension, diabetes, and obesity), and living in congregate settings or multigenerational households [1–3].

Without question, the COVID-19 pandemic disproportionately impacted older adults in terms of greater disease severity and mortality [1,2,4]. Older people were also negatively affected by COVID mitigation measures, such as lockdowns and social distancing, which increased social isolation, loneliness, and contributed to interruptions in the receipt of vital health and social services during the first years of the pandemic [2–4]. However, despite all the talk about aging, largely lacking in this narrative are the voices of older adults themselves and understanding how this population responded to the myriad threats of COVID-19. In this paper, we examine how older adults played an active role in responding to the pandemic rather than being passive victims in the greatest health crisis in generations and how this was expressed through interactions with their social networks.

Managing Toxic Leaders and Dysfunctional Organizational Dynamics Seth Allcorn, 2024-04-29 Understanding experience at work especially in organizations that have toxic leaders and dysfunctional organizational dynamics is a multidimensional undertaking that must include in depth perspectives informed by psychosocial theory This may be best accomplished by relying on complementary theories to account for what is found and experienced in our organizations and in particular a better understanding of why this is happening Why did she do that Why did he say that Why did a group react the way they did Why is critical in terms of understanding organizational dynamics Our lives at work in large complex and multidimensional organizations are saturated with experience some of which is fulfilling and some are of a darker nature that arises from the presence of toxic leaders and dysfunctional organizational dynamics Understanding these toxicities and dysfunctions and their effect on organization members is approached by first raising their awareness at the beginning of the book before providing psychosocially informed insights that form a basis for understanding and organizational change in the following sections This book explores these work life dynamics by grounding them in concrete examples and then using complementary psychoanalytically informed perspectives to illuminate their underlying often unconscious nature filling an important gap in management and organizational literature
