*Forest Decline and Atmospheric Deposition Effects in the French Mountains* M. Kaennel,Guy Landmann,Maurice Bonneau,2012-12-06 Forest decline became a matter of public and scientific concern in France in 1983 when conifers in the Vosges mountains were found to exhibit unusual crown deterioration An impassioned controversy on a supposedly large scale forest health problem was then in full swing in Central Europe A co ordinated research programme entitled DEFORPA Deperissement des For ts et Pollution AtmospMrique was launched in 1984 This programme ran from 1984 to 1991 and a number of projects are still in progress The Programme was sponsored by three French ministries Environnement Agriculture and Forestry Research and Technologyl several state agencies various regional authorities and the Commission of the European Communities DO xn and DG VI Initially emphasis was solely laid on the understanding of forest decline in the mountainous areas because damage was most obvious there in relation to natural and man made factors Air pollution was given high but not overwhelming priority Thus the DEFORPA Programme was not in its essence a nation wide assessment of air pollution effects unlike a number of national acidification research programmes in Europe and North America During the programme however the areas of concern expanded In particular research into water acidification in the Vosges mountains was developed in parallel with the DEFORPA Programme and possible eutrophication of the ground flora in northeastern France became the subject of new research *Festskrift tillägnad Vilhelm Bjerknes den 14 mars 1942* ,1942
