Graham,1987 Addresses the important topic of providing adequate computational power for the demanding real time requirements of advanced robotic systems Shows how many of the recent advances in image processing control and machine intelligence can be incorporated into robotic systems in real time Explains how innovative specialized computer architectures that include both parallelism and special purpose hardware can speed the development of robot potential   *Guide to Microforms in Print* ,1978   Communicating Process Architectures 2004 Ian East,J. Martin,P.H. Welch,2004 Communicating Process Architecture CPA describes an approach to system development that is process oriented It makes no great distinction between hardware and software It has a major root in the theory of Communicating Sequential Processes CSP However the underlying theory is not limited to CSP The importance of mobility of both channel and process within a network sees integration with ideas from the calculus Other formalisms are also exploited such as BSP and MPI The focus is on sound methods for the engineering of significant concurrent systems including those that are distributed across the Internet or within a single chip and or software scheduled on a single execution unit Traditionally at CPA the emphasis has been on theory and practice developing and applying tools based upon CSP and related theories to build high integrity systems of significant size In particular interest focuses on achieving scalability and security against error The development of Java C and C libraries to facilitate secure concurrent programming using mainstream languages has allowed CPA to continue and proliferate This work continues in support of the engineering of distributed applications Recently there has been greater reference to theory and its more direct application to programming systems and languages In this volume the formal CSP is very well presented The papers provide a healthy mixture of the

academic and commercial software and hardware application and infrastructure which reflects the nature of the discipline
