Algebra, K-Theory, Groups, and Education Hyman Bass, Tsit-Yuen Lam, Andy R. Magid, 1999 This volume includes expositions of key developments over the past four decades in commutative and non commutative algebra algebraic K theory infinite group theory and applications of algebra to topology Many of the articles are based on lectures given at a conference at Columbia University honoring the 65th birthday of Hyman Bass Important topics related to Bass s mathematical interests are surveyed by leading experts in the field Of particular note is a professional autobiography of Professor Bass and an article by Deborah Ball on mathematical education The range of subjects covered in the book offers a convenient single source for topics in the field

Computational Aspects of Polynomial Identities Alexei Kanel-Belov, Louis Halle Rowen, 2005-02-22 A comprehensive study of the main research done in polynomial identities over the last 25 years including Kemer s solution to the Specht problem in characteristic 0 and examples in the characteristic p situation The authors also cover codimension theory starting with Regev s theorem and continuing through the Giambruno Zaicev exponential rank T

Lectures on Advances in Combinatorics Rudolf Ahlswede, Vladimir Blinovsky, 2008-05-17 The lectures concentrate on highlights in Combinatorial Chapters II and III and Number Theoretical Chapter IV Extremal Theory in particular on the solution of famous problems which were open for many decades However the organization of the lectures in six chapters does neither follow the historic developments nor the connections between ideas in several cases With the specified auxiliary results in Chapter I on Probability Theory Graph Theory etc all chapters can be read and taught independently of one another In addition to the 16 lectures organized in 6 chapters of the main part of the book there is supplementary material for most of them in the Appendix In particular there are applications and further exercises research problems conjectures and even research programs The following books and reports B97 ACDKPSWZ00 A01 and ABCABDM06 mostly of the authors are frequently cited in this book especially in the Appendix and we therefore mark them by short labels as B N E and G We emphasize that there are also Exercises in B a Problem Section with contributions by several authors on pages 1063 1105 of G which are often of a combinatorial nature and Problems and Conjectures on pages 172 173 of E

Catalogue, Books and Journals in Advanced Mathematics American Mathematical Society,1985 **The Dirichlet Space and Related Function Spaces** Nicola Arcozzi,Richard Rochberg,Eric T. Sawyer,Brett D. Wick,2019-09-03 The study of the classical Dirichlet space is one of the central topics on the intersection of the theory of holomorphic functions and functional analysis It was introduced about 100 years ago and continues to be an area of active current research The theory is related to such important themes as multipliers reproducing kernels and Besov spaces among others The authors present the theory of the Dirichlet space and related spaces starting with classical results and including some quite recent achievements like Dirichlet type spaces of functions in several complex variables and the corona problem The first part of this book is an introduction to the function theory and operator theory of the classical Dirichlet space a space of holomorphic functions on the unit disk defined by a smoothness criterion The Dirichlet space is also a Hilbert space with a reproducing kernel and is the model for the dyadic Dirichlet space a sequence space defined on the dyadic tree These various viewpoints are used to study a range of topics including the Pick property multipliers Carleson measures boundary values zero sets interpolating sequences the local Dirichlet integral shift invariant subspaces and Hankel forms Recurring themes include analogies sometimes weak and sometimes strong with the classical Hardy space and the analogy with the dyadic Dirichlet space The final chapters of the book focus on Besov spaces of holomorphic functions on the complex unit ball a class of Banach spaces generalizing the Dirichlet space Additional techniques are developed to work with the nonisotropic complex geometry including a useful invariant definition of local oscillation and a sophisticated variation on the dyadic Dirichlet space Descriptions are obtained of multipliers Carleson measures interpolating sequences and multiplier interpolating sequences estimates are obtained to prove corona theorems **Queen's Papers in Pure and Applied Mathematics** ,1976
