Mathematical Reviews ,2004      **Advances in Information Retrieval** W. Bruce Croft,2006-04-11 The Center for Intelligent Information Retrieval CIIR was formed in the Computer Science Department of the University of Massachusetts Amherst in 1992 The core support for the Center came from a National Science Foundation State Industry University Cooperative Research Center S IUCRC grant although there had been a sizeable information retrieval IR research group for over 10 years prior to that grant The basic goal of these Centers is to combine basic research applied research and technology transfer The CIIR has been successful in each of these areas in that it has produced over 270 research papers has been involved in many successful government and industry collaborations and has had a significant role in high visibility Internet sites and start ups As a result of these efforts the CIIR has become known internationally as one of the leading research groups in the area of information retrieval The CIIR focuses on research that results in more effective and efficient access and discovery in large heterogeneous distributed text and multimedia databases The scope of the work that is done in the CIIR is broad and goes significantly beyond traditional areas of information retrieval such as retrieval models cross lingual search and automatic query expansion The research includes both low level systems issues such as the design of protocols

and architectures for distributed search as well as more human centered topics such as user interface design visualization and data mining with text and multimedia retrieval

Data Science Advancements in Pandemic and Outbreak Management Asimakopoulou, Eleana,Bessis, Nik,2021-04-09 Pandemics are disruptive Thus there is a need to prepare and plan actions in advance for identifying assessing and responding to such events to manage uncertainty and support sustainable livelihood and wellbeing A detailed assessment of a continuously evolving situation needs to take place and several aspects must be brought together and examined before the declaration of a pandemic even happens Various health organizations crisis management bodies and authorities at local national and international levels are involved in the management of pandemics There is no better time to revisit current approaches to cope with these new and unforeseen threats As countries must strike a fine balance between protecting health minimizing economic and social disruption and respecting human rights there has been an emerging interest in lessons learned and specifically in revisiting past and current pandemic approaches Such approaches involve strategies and practices from several disciplines and fields including healthcare management IT mathematical modeling and data science Using data science to advance in situ practices and prompt future directions could help alleviate or even prevent human financial and environmental compromise and loss and social interruption via state of the art technologies and frameworks Data Science Advancements in Pandemic and Outbreak Management demonstrates how strategies and state of the art IT have and or could be applied to serve as the vehicle to advance pandemic and outbreak management The chapters

will introduce both technical and non technical details of management strategies and advanced IT data science and mathematical modelling and demonstrate their applications and their potential utilization within the identification and management of pandemics and outbreaks It also prompts revisiting and critically reviewing past and current approaches identifying good and bad practices and further developing the area for future adaptation This book is ideal for data scientists data analysts infectious disease experts researchers studying pandemics and outbreaks IT crisis and disaster management academics practitioners government officials and students interested in applicable theories and practices in data science to mitigate prepare for respond to and recover from future pandemics and outbreaks
