Barry, 2005-10-13 The Arctic can be viewed as an integrated system characterised by intimate couplings between its atmosphere ocean and land linked in turn to the larger global system This comprehensive up to date assessment begins with an outline of early Arctic exploration and the growth of modern research Using an integrated systems approach subsequent chapters examine the atmospheric heat budget and circulation the surface energy budget the hydrologic cycle and interactions between the ocean atmosphere and sea ice cover Reviews of recent directions in numerical modelling and the characteristics of past Arctic climates set the stage for detailed discussion of recent climate variability and trends and projected future states Throughout satellite remote sensing data and results from recent major field programs are used to illustrate key processes The Arctic Climate System provides a comprehensive and accessible overview of the subject for researchers and advanced students in a wide range of disciplines *Environmental Structure And Function: Climate System - Volume II* George Vadimovich Gruza, 2009-05-20 Environmental Structure and Function Climate System is a component of Encyclopedia of Earth and Atmospheric Sciences in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias This 2 volume set contains several chapters each of size 5000 30000 words with perspectives applications and extensive illustrations It carries state of the art knowledge in the fields of Environmental Structure and Function Climate Systems and is aimed by virtue of the several applications at the following five major target audiences University and College Students Educators Professional Practitioners Research Personnel and Policy Analysts Managers and Decision Makers and NGOs **Arctic System Science**, 1993 **The Global Climate System Review**, 1993 *The Arctic Climate System* Mark C. Serreze, 2005 This comprehensive up to date assessment begins by outlining early Arctic exploration and the growth of modern research Recent climate variability and trends and projected future states are discussed in detail The Arctic Climate System provides an overview of the subject for researchers and advanced students in a wide range of disciplines **ENSO Signal Network Newsletter**, 2003 *Encyclopedia of the World's Biomes*, 2020-06-26 Encyclopedia of the World's Biomes is a unique five volume reference that provides a global synthesis of biomes including the latest science All of the book's chapters follow a common thematic order that spans biodiversity importance principal anthropogenic stressors and trends changing climatic conditions and conservation strategies for maintaining biomes in an increasingly human dominated world This work is a one stop shop that gives users access to up to date informative articles that go deeper in content than any currently available publication Offers students and researchers a one stop shop for information currently only available in scattered or non technical sources Authored and edited by top scientists in the field Concisely written to guide the reader though the topic Includes meaningful illustrations and suggests further reading for those needing more specific information *Arctic Climate System Study (ACSYS)*, 1994 **Arctic Climate Change** Peter Lemke, Hans-Werner Jacobi, 2011-11-22 The Arctic is now

experiencing some of the most rapid and severe climate change on earth Over the next 100 years climate change is expected to accelerate contributing to major physical ecological social and economic changes many of which have already begun Changes in arctic climate will also affect the rest of the world through increased global warming and rising sea levels The volume addresses the following major topics Research results in observing aspects of the Arctic climate system and its processes across a range of time and space scales Representation of cryospheric atmospheric and oceanic processes in models including simulation of their interaction with coupled models Our understanding of the role of the Arctic in the global climate system its response to large scale climate variations and the processes involved

Satellite-based Estimates of Sea Ice Volume Flux: Applications to the Fram Strait Region Gunnar Spreen, 2008-08-04 Doctoral Thesis Dissertation from the year 2008 in the subject Geography Earth Science Physical Geography Geomorphology Environmental Studies grade 1 0 University of Hamburg Institut für Meereskunde language English abstract The sea ice export out of the Arctic Ocean through Fram Strait into the Greenland Sea is the single largest source of freshwater in the Nordic Seas and therefore of special importance for the hydrological cycle of the North Atlantic On its way south the exported sea ice melts and thereby modifies the stratification of the ocean surface mixed layer which in turn influences oceanic deep convection and water mass transformation processes in the Nordic Seas and thus impact global ocean thermohaline circulation The lack of spatial sea ice thickness information has been one of the weaknesses for previous existing methods to determine the sea ice export In this study a new method to obtain the sea ice volume flux exclusively from satellite measurements is presented Previous estimates of the sea ice volume flux relied on ice draft measurements of a single Upward Looking Sonar ULS in the Greenland Sea The GLAS laser altimeter onboard the ICESat satellite launched in 2003 offers for the first time the opportunity to obtain the spatial sea ice thickness distribution up to 86 N latitude In this study a method to determine the sea ice freeboard from ICESat altimeter data is developed and applied to nine ICESat measurement periods between 2003 and 2007 Assuming hydrostatic balance and by utilization of further satellite in situ and climatological data these sea ice freeboard measurements are converted to sea ice thickness maps of the Fram Strait region The satellite based ice thickness estimates are combined with sea ice area and sea ice drift as retrieved from AMSR E microwave radiometer measurements at 89GHz to obtain the sea ice volume flux The errors of the input quantities and the final sea ice volume flux are assessed Using this method the spatial sea ice volume flux distribution is obtained from satellite observations for the first time The Fram Strait sea ice volume flux is further investigated by calculating a monthly sea ice volume flux time series between January 2003 and April 2007 Summer months have to be disregarded due to missing sea ice drift data The sea ice volume flux shows large interannual and seasonal variability A mean monthly Fram Strait sea ice volume flux of 248 90 km³ month with respective minimum and maximum values of 112 km³ month May 2003 and 484 km³ month December 2004 was found
