Engineering Subcategory Contact Editor Stern      **Analytical Applications of Immobilized Enzyme Reactors** S. Lam, G. Malikin, 1994 Enzymes are bio catalysts which effect transformation of substrates to products with high specificity The usage of enzymes in domestic and industrial applications is well known and has been well documented since the early history of civilization With the advances in understanding of enzymology usage of enzymes in industrial and biotechnological processes and molecular medicine has proliferated One of the key factors in the widespread application of enzymes in modern technologies is the development of enzyme immobilization techniques which overcome certain practical functional and economic constraints Many natural enzymes can be stabilized by immobilization on solid matrices with most of the activity retained for a variety of applications An important application of immobilized enzymes is in liquid chromatography In the last decade post column enzyme detection has become established as an important discipline in liquid chromatography The new detection approach offers more sensitive and specific ways for measuring major classes of biomolecules Reactors are fabricated by packing the immobilized enzymes into small columns which can be placed immediately after an HPLC column
