

Midterm 1 Review

Chapter 1.1, 1.2, 1.3, Chapter 2.1, 2.2, 2.3, Chapter 3

Chapter 1 Psychology: Yesterday and Today

Chapter 1.1 What is Psychology?

Psychology

- The study of **mental processes** and **behaviour**.
- Concerned with empirically examining the mind and behaviour and determining how each is influenced by the psychology of the organism as well as the effects of the external environment.
- **Mental processes**: activities of our brain when engaged in thinking, processing information, and using language.
- **Behaviour**: observable activities of an organism, often in response to environmental cues.
- When psychologists study mental processes and behaviour, they generally have one of four goals in mind:
 - o **Descriptions**: psychologists seek to describe very specifically the things that they observe. They have described phenomena such as how we fall in love, how babies learn to talk, how we make decisions, etc.
 - o **Explanation**: telling what, where, when, and how is sometimes not enough. The key goal of every psychologist is the answer the question "why?". Psychologists have developed hypotheses and theories to explain why people develop addictions and why we get hungry.
 - o **Predictions**: they seek to predict the circumstances under which a variety of behaviours and mental processes are likely to occur. There has been research to predict the conditions under which we are most likely to offer a stranger in need.
 - o **Control**: we often encounter situations in which we want to either limit or increase certain behaviours and mental processes - whether our own or others.
- All our thoughts and actions, down to the simplest tasks, involve complex activation and coordination of a number of levels - the levels of the **brain**, the **individual**, and the **group**.
- No psychological process occurs solely at one of these levels.

Brain Level

- Psychologists consider the neuronal (brain cell) activity that occurs during the transmission and storage of information. They also focus on the structure of the brain and the genes that guide its formation.

Individual Level

- Psychologists analyze how the content of mental processes - including emotions, thoughts, and ideas - form and influence behaviour.
- This level includes ideas such as consciousness, intelligence, personality, and motivation.

Group Level
