A Model for Communication about Biotechnology Bev France, 2006 This book incorporates two major themes into a model for communication about biotechnology The first is that of a communicating community defined as a relatively coherent social group engaging in communication within itself As biotechnologists do not

constitute a unitary group this book refers to biotechnology communities Similarly the broad notion of the public is considered to be inadequate and the notion of distinct public communities is used The members of each community are considered to have a view of biotechnology made up of their understandings of the nature of science of biotechnology understandings of the key concepts and models used in biotechnology perceptions of the nature of risk and beliefs and attitudes about biotechnology The second major theme is that of search space This is the intersection in a virtual arena of the components of the views of two communities Where there are elements that are in common to the two communication in terms of them is possible Where there is no commonality the degrees of understanding reached must be used to construct a mutual understanding that may evolve into an agreement

Biotechnology in Africa Florence Wambugu, Daniel Kamanga, 2014-05-10 In this book Florence Wambugu and Daniel Kamanga of Africa Harvest Biotech Foundation International bring together expert African authorities to critique various biotechnology initiatives and project future developments in the field in Africa For the first time African voices from multidisciplinary fields as diverse as economics agriculture biotechnology law politics and academia demand to be allowed to set the continent's biotech development agenda This book argues that there is a great future for biotechnology in Africa which sidesteps western interests that do not match those of the local populace In these diverse chapters Africa's political and scientific leaders demand a greater say in how research and development funds are allocated and spent They argue that Africa's political leaders must see both clear benefits and have elbow room to drive the change required This is the way that African governments can employ workable policies suitable biosafety legislation and regulation and respond effectively to public private partnerships Wambugu and Kamanga show that biotechnology has the potential to improve food security and standard of living as well as mitigate the detrimental effects of climate change on the African continent

The Science Communication Environment Eve Merton, 2009 Biology in Context Eileen Kennedy, Peter Hickman, 2002 *The Study of the Communication Patterns of Boston-Cambridge Regional Biotech Firms to Universities* Nada Hashmi, System Design and Management Program, 2008 This paper analyzes data from a study which focused on understanding the informal scientific communication network among Biotechnology firms in the Boston Cambridge Biotech area A previous study Allen et al 2009 provided an overview of the network how the firms were connected to one another and the frequency of the communications The analysis for this study focuses on the firms and their communication patterns to the universities to better understand the potentially continuing role of the universities The goal of the study is to analyze the factors that influenced communication patterns The following factors were studied size age type of firm and degrees of centrality In conclusion the study finds the universities are tightly integrated into the biotech network Some firms chose to communicate only with the universities In addition we find size and age to have the greatest influence on this Finally degrees of centrality also play a significant role in the tendency of research scientists within firms to communicate with universities
