diseases that reduce productivity quality and profitability Application of exogenous chemicals and development of endogenous resistance are two general approaches to controlling plant diseases As the former falls under continued attack and regulation the latter fortunately becomes more achievable through biotechnology Biotechnology and Plant Protection Bacterial Pathogenesis and Disease Resistance explores the application of biotechnology to understanding bacterial pathogenesis and the nature of plant resistance to bacterial disease More important the information presented in this volume foreshadows the development of plants with increased native resistance to bacterial disease Classical plant breeding has made great progress in developing resistant plants through largely empirical approaches but a direct understanding of the genetic aspects of pathogenesis and resistance will accelerate the process
