New World vultures uses sense of smell ability to find food.

Tubenoses, a group of seabirds, also make good use of it.

Kiwis, have very poor eyesight and instead rely on their sense of smell to detect prey.

Birds do not have traditional teeth like mammals, but some species have serrations in their beaks that resemble teeth. These serrations help them grip and tear food, making it easier to eat.

Unique birds are the only ones with nostrils located at the end of their long bills, allowing them to sniff out food in their habitat.
