Alexander Galkin who was named Children's Trainer of the Year in 2016 by the Russian Chess Federation and Women's International Master Anastasia Travkina provides a large volume of practical knowledge **Soviet Middlegame**

Technique Petr Arsen'evich Romanovskii, 2013 Many of the classics of Soviet chess literature have struggled to see the light of day but none more so than Soviet Middlegame Technique by Peter Romanovsky The original version of this famous guide to the middlegame was published in 1929 when Romanovsky was Soviet Champion Romanovsky later decided to update and improve his work As he finished his work in 1942 World War II was underway and Romanovsky was trapped in the notorious siege of Leningrad The author barely survived and his manuscript was lost Romanovsky was undeterred and finally recreated his improved book in 1960 His writing was later translated into English and published in two titles one on Planning and the other on Combinations In this fresh translation we have included both works to create the ultimate version of a classic of Soviet chess literature GM Alexander Kotov on Romanovsky One of the best books in the world's chess literature

101 Endgame Crimes and Punishments Alexander Galkin, 2020-05-25 This endgame tactics textbook by Grandmaster Alexander Galkin who was named Children's Trainer of the Year in 2016 by the Russian Chess Federation provides a large volume of practical knowledge The vast majority of chess combination textbooks contain a selection of positions and exercises where the student is asked to find a tactic or carry out an attack against the enemy king That way they learn to develop their combinational vision and ability to attack However there is not much focus on the mistake by one of the players that led to the critical position where the combination or decisive attack became possible In this book aimed at strong tournament players 1900-2300 Elo or fast improving juniors the author introduces a wider approach to developing endgame tactics skills that a formidable chess player needs Specifically he presents 101 positions from games of grandmasters played in 2019 including super GMs such as Magnus Carlsen Ding Liren Alireza Firouzja Maxime Vachier Lagrave Alexander Grischuk Wang Hao Alexei Shirov Samuel Shankland Kirill Alekseenko and Levon Aronian in which he first explains the mistake made by one of the players in underestimating their opponent's counterplay then he analyzes how the game progressed where punishment for the mistake is meted out After that he returns to the starting position to demonstrate the correct or a more promising continuation Therefore the text is structured so that each challenge contains the starting diagram twice before the moves in the actual game and then on the page overleaf before the solution Studying these key fragments from grandmaster games will help a player to develop their endgame approach

Firstly the student analyzes why a move or series of moves by one of the players was erroneous What counterplay by the opponent did the player making the mistake underestimate Secondly armed with this answer the student can review the position to try and figure out the better move If the student is working with a coach then the coach should first set up the position on the board demonstrate the erroneous move played and ask the student to find the refutation to that bad move After the refutation is found by the student the coach should once again set up the critical position and ask the student to find the strongest continuation for the initial player This may be one or more moves depending on the position Naturally in the case of self study the student can change their approach either trying to figure out the refutation to the error by covering up the subsequent text or simply studying the moves in the game before trying to find the better continuation which is detailed overleaf together with the starting diagram

The Middle Game in Chess Reuben Fine,1974

The Exchange Sacrifice Unleashed Georg Mohr,2023-06-20 The book you have just started reading is about a very interesting and difficult concept the exchange sacrifice This is the moment in chess when basic mathematics breaks down the moment when 3 counts equal to or even more than 5 So let us leave the mathematics aside and try to figure out why this simple calculation is so difficult to understand The answer is largely hidden in psychology as the ninth World Champion Tigran Petrosian has often told us as the man who brought this strategic tactical chess concept to its first peak Chess beginners were taught the value of pieces by their teachers parents grandparents perhaps at school or even later in the beginners sections of chess clubs We explain the difference between piece values to children in the simplest way possible with the help of a unit of measurement and in chess those units are the pawns They tell us that a rook is worth five pawns units and a knight and a bishop are worth about three each They also tell us to always be careful especially during exchanges to ensure we take at least as much from our opponent as he or she took from us So one rook at a time perhaps for a bishop and a knight next to two pawns This chess thinking is done quickly and very strongly subconsciously in most one could even say all Therefore when choosing moves we will automatically reject unfavorable exchanges But who trades a queen for a knight a bishop for a pawn and the like We know from our own life experience that it is better to have ten coins in our pocket than three and I prefer three to one This psychological barrier is the most difficult step in making the decision to sacrifice And so it is with the sacrifice of an exchange Five for three that is Even five for four if we get a pawn for the rook along with the knight or the bishop I am not stupid you think The Exchange Sacrifice Unleashed brings different games or coaches try to explain this and that to us we see that a material advantage is not always something to celebrate about
