Its chapters cover topics such as the impacts of local sociopolitical changes and global forces on public and private education, emerging online and distance education, administrative and intellectual leadership, quality assessment, graduate employability, global mobility of students, and the contributions of global diaspora of Nepalese scholars. The central questions of the book are: What are some of the local and global academic interactions in Nepalese higher education and what are the current challenges and pathways for advancements and improvements? How can Nepalese higher education absorb twenty-first century values of quality education as external forces while adapting new developments to local needs? How can scholars interested in Nepalese, South Asian, and international higher education create opportunities for scholarship and professional collaboration around research on higher education in this region of South Asia? What issues and perspectives can research and scholarship about Nepal's higher education offer to international discourse in higher education? The book offers information and resources to international educators interested in the dynamics of Nepalese and, by implication, South Asian higher education, by introducing key challenges in policy and programs, innovative changes in curricula, effective approaches in technology application, and strategies for future integration of global reforms in education. **Tools and Modes of Representation in the Laboratory Sciences** U. Klein, 2001-10-31 Fourteen chapters provide insights into the efforts of 19th and 20th century scientists to construct working representations of invisible objects such as the structural formula of a dye, a three-dimensional model of a protein, or a table conveying relationships between chemical elements. The essays focus on scientists' pragmatic use of representation, exploring the concrete ways that scientists implement sign systems as productive tools both to achieve and to shape their organizational goals. Editor Klein is associated with the Max Planck Institute for the History of Science, Berlin. Annotation copyrighted by Book News Inc, Portland, OR Reaction and Molecular Dynamics A. Lagana, A. Riganelli, 2012-12-06 The amazing growth of computational resources has made possible the modeling of complex chemical processes. To develop these models, one needs to proceed from rigorous theoretical methods to approximate ones by exploiting the potential of innovative architectural features of modern concurrent processors. This book reviews some of the most advanced theoretical approaches in the field of molecular reaction dynamics in order to cope as rigorously as possible with the complexity of real systems.
