Classroom Applications of Microcomputers Robert V. Bullough, LaMond F. Beatty, 1991 **Microcomputer Applications in the Classroom** Alan M. Hofmeister, 1984-01-01 Microcomputer Applications in the Elementary Classroom George W. Bright, 1987-01-01 There is a serious risk that the extra burden of adding instruction about microcomputers and software to regular elementary school curricula may turn off both teachers and students to the potential that microcomputers have for improving learning To counter this risk microcomputers should be integrated into the regular instructional program of elementary schools This book is primarily intended for elementary school teachers who already have some experience with microcomputers but no expertise is assumed Following an introduction to education with computers many applications and issues are discussed including 1 programs for drill and practice 2 tutorials 3 games 4 simulations 5 computer error diagnosis 6 instructional software evaluation 7 programming 8 problem solving 9 word processing 10 computer literacy and 11 administrative uses of microcomputers This publication contains 109 references CW

Microcomputer Applications In Education And Training For Developing Countries National Research Council (U.S.). Board on Science and Technology for International Development, 1987 **Microcomputers and the Classroom Teacher** Gail A. Caissy, 1987 This monograph for teachers addresses two emerging areas in the computing field providing inservice training in microcomputer use for the general teaching population and integrating the use of microcomputers into the overall curriculum A brief discussion of why computers should be used in the classroom introduces five chapters which provide overviews of the following topics 1 the use of computers in teaching and learning areas of computer use and using the computer as a teaching learning tool 2 types of software available for schools computer assisted instruction software applications software and databases 3 integrating computers into the classroom 4 developing a plan for using computers in the classroom setting up a classroom computer center and working with only one computer in the classroom and 5 evaluating educational software general questions questions about instructional design and questions about physical characteristics of the program A concluding statement argues that the key to continued growth and expansion in the educational computing field lies with classroom teachers and urges them to take an interest in computers and begin to use this important new tool in their classrooms A 71 item reference list concludes the document EW **"Successful" Use of Microcomputers in Classroom Instruction** , 1983 A widely shared belief among many policy makers educators parents and the general public is that microcomputers have the potential to help pull U S education out of its current state of mediocrity National Commission on Excellence in Education 1983 and subsequently improve its quality A number of barriers however impede the widespread implementation of microcomputers in classrooms Along with cost the major barrier to full implementation is the lack of knowledge possessed by researchers and educational practitioners alike regarding the nature of the knowledge skills and attitudes a teacher must have to use microcomputers successfully in classroom instruction This paper addresses the standard

implied in such an evaluation that is the nature of successful classroom microcomputer use that might be embodied in the teaching of widely recognized expert or master teachers From the teachers standpoint microcomputers are an educational technology used as an instructional tool Thus the application of the instruction tool should be central to such an evaluation within the broader context of ongoing classroom instruction
