Environmental Biotechnology Gareth M. Evans, Judith C. Furlong, 2003-06-13 The application of biologically engineered solutions to environmental problems has become far more readily acceptable and widely understood However there remains some uncertainty amongst practitioners regarding how and where the microscopic functional level fits into the macroscopic practical applications It is precisely this gap which the book sets out to fill Dividing the topic into logical strands covering pollution waste and manufacturing the book examines the potential for biotechnological interventions and current industrial practice with the underpinning microbial techniques and methods described in context against this background Each chapter is supported by located case studies from a range of industries and countries to provide readers with an overview of the range of applications for biotechnology Essential reading for undergraduates and Masters students taking modules in Biotechnology or Pollution Control as part of Environmental Science Environmental Management or Environmental Biology programmes It is also suitable for professionals involved with water waste management and pollution control Biotechnology Applications in Beverage Production C. Cantarelli, 2011-10-01 Beverage production is among the

oldest though quantitatively most significant applications of biotechnology methods based on the use of microorganisms and enzymes Manufacturing processes employed in beverage production originally typically empirical have become a sector of growing economic importance in the food industry Pasteur's work represented the starting point for technological evolution in this field and over the last hundred years progress in scientifically based research has been intense This scientific and technological evolution is the direct result of the encounter between various disciplines chemistry biology engineering etc Beverage production now exploits all the various features of first and second generation biotechnology screening and selective improvement of microorganisms their mutations their use in genetic engineering methods fermentation control control of enzymatic processes including industrial plants use of soluble enzymes and immobilized enzyme reactors development of waste treatment processes and so on Research developments involving the use of biotechnology for the purpose of improving yields solving quality related problems and stimulating innovation are of particular and growing interest as far as production is concerned Indeed quality is the final result of the regulation of microbiological and enzymatic processes and innovation is a consequence of improved knowledge of useful fermentations and the availability of new ingredients The Council of Europe's sponsorship of the work which led to the contributions to this volume is clear evidence of the growing need for adequate information about scientific and technological progress
