Recent Developments in Applied Demand Analysis E.A. Selvanathan, Kenneth W. Clements, 2012-12-06 The study of consumer demand is important for a number of reasons First as total consumption absorbs more than 70 percent of GDP in most countries it is the largest of the macroeconomic aggregates thus having great significance for the state of the economy as a whole and business conditions Second the pattern of consumption contains a wealth of useful information regarding economic welfare and living standards Closely allied to this is that as consumption both current and future is the ultimate objective of all economic activity and economic systems mercantilists notwithstanding in a fundamental sense consumption patterns are an objective way of measuring and assessing economic performance Finally an understanding of the price responsiveness of consumption is of crucial importance for a host of microeconomic policy issues including public utility pricing the measurement of distortions optimal taxation and the treatment of externalities The analysis of consumer demand is one of the major successes of economics as it represents the near perfect marriage of theory and econometrics a situation almost unparalleled in any other field of economics This field has attracted a lot of attention since the introduction of the linear expenditure system and its application to British data by Stone 1954 followed by the differential demand system of Barten 1964 and Theil 1965 1975 1976 1980 and developments thereafter
