Agent Autonomy:

Agent Autonomy Henry Hexmoor, Cristiano Castelfranchi, Rino Falcone, 2003-03-31 A clear trend in the study and design of autonomous agents during the late 1990s and early 2000s has been a growing concern with being able to adjust the autonomy particularly in the context of interactions between artificial intelligences and humans during space missions The 11 papers present the state of the field illustrate maturing trends ranging from analytical and formal approaches to concrete attempts and application problems and challenge researchers to return to that old time artificial intelligence Representing and analyzing adaptive decision making frameworks obligations and cooperation as two sides of social responsibility and policy based agent directability are among the topics Annotation c 2003 Book News Inc Portland OR booknews com

Intelligent Decision Support Systems in Agent-mediated Environments Gloria E. Phillips-Wren, L. C. Jain, 2005 Research has shown that harassed decision makers in decision support technologies for real time and uncertain decision problems often ignore crucial information use inefficient strategies and generate fewer alternatives Examples of such problems are medical emergencies traffic flow and military applications Researchers are limited by a narrow understanding of the most effectual methods to support decision making in real time and stressful situations Intelligent software agents offer one approach to operationalizing a decision making support system in these circumstances by providing an environment that can adapt to speed and change Agent technology has been used to aid and automate complex problem solving such as brokering in electronic commerce and financial services An agent is a software package that carries out tasks for others autonomously whether the others are human users business processes workflows or applications *Proceedings*, 2005
