Dempsey,1977 *Digital Concepts Using Standard Integrated Circuits* Richard S. Sandige,1978 **Semiconductor Devices and Integrated Electronics** A. G. Milnes,2012-12-06 For some time there has been a need for a semiconductor device book that carries diode and transistor theory beyond an introductory level and yet has space to touch on a wider range of semiconductor device principles and applica tions Such topics are covered in specialized monographs numbering many hun dreds but the voluminous nature of this literature limits access for students This book is the outcome of attempts to develop a broad course on devices and integrated electronics for university students at about senior year level The edu cational prerequisites are an introductory course in semiconductor junction and transistor concepts and a course on analog and digital circuits that has intro duced the concepts of rectification amplification oscillators modulation and logic and SWitching circuits The book should also be of value to professional engineers and physicists because of both the information included and the de tailed guide to the literature given by the references The aim has been to bring some measure of order into the subject area examined and to provide a basic structure from which teachers may develop themes that are of most interest to students and themselves Semiconductor devices and integrated circuits are reviewed and fundamental factors that control power levels frequency speed size and cost are discussed The text also briefly mentions how devices are used and presents circuits and comments on representative applications Thus the book seeks a balance be tween the extremes of device physics and circuit design *Aircraft Digital Electronic and Computer Systems, 2nd ed* Mike Tooley,2013-07-18 An introduction to the principles of aircraft digital and electronic systems this book is written for anyone pursuing a career in aircraft maintenance engineering or a related aerospace engineering discipline Suitable for those studying towards licensed aircraft maintenance engineer status as part of an EASA Part 66 or FAR 147 approved course or those taking Aerospace Engineering City Guilds modules EDEXCEL National
