Almost Completely Decomposable Groups:

Almost Completely Decomposable Groups A Mader,2000-03-09 An almost completely decomposable abelian α -group is an extension of a finite direct sum of subgroups of the additive group of rational numbers by a finite abelian group. Examples are easy to write and are frequently used but have been notoriously difficult to study and classify because of their computational nature. However a general theory of α -groups has been developed and a suitable weakening of isomorphism, Lady's near isomorphism, has been established as the right concept for studying α -groups. A number of important classes of α -groups has been successfully classified. Direct sum decompositions of α -groups are preserved under near isomorphism and the well known pathological decompositions can actually be surveyed in special cases. **Almost Completely**

Partially Ordered Sets David Arnold,2012-11-14 A recurring theme in a traditional introductory graduate algebra course is the existence and consequences of relationships between different algebraic structures. This is also the theme of this book: an exposition of connections between representations of finite partially ordered sets and abelian groups. Emphasis is placed throughout on classification: a description of the objects up to isomorphism and computation of representation type as a measure of when classification is feasible. David M. Arnold is the Ralph and Jean Storm Professor of Mathematics at Baylor University. He is the author of *Finite Rank Torsion Free Abelian Groups and Rings* published in the Springer-Verlag Lecture Notes in Mathematics series; a co-editor for two volumes of conference proceedings and the author of numerous articles in mathematical research journals. His research interests are in abelian group theory and related topics such as representations of partially ordered sets and modules over discrete valuation rings, subrings of algebraic number fields and pullback rings. He received his Ph.D. from the University of Illinois Urbana and was a member of the faculty at New Mexico State University for many years.

Abelian Groups and Modules Alberto Facchini, Claudia Menini,2012-12-06 On the 26th of November 1992 the organizing committee gathered together at Luigi Salce's invitation for the first time. The tradition of abelian groups and modules Italian conferences (Rome 77, Udine 85, Bressanone 90) needed to be kept up by one more meeting. Since that first time it was clear to us that our goal was not so easy. In fact the main intended topics of abelian groups, modules over commutative rings and non commutative rings have become so specialized in the last years that it looked really ambitious to fit them into only one meeting. Anyway since everyone of us shared the same mathematical roots we did want to emphasize a

common link So we elaborated the long symposium schedule three days of abelian groups and three days of modules over non commutative rings with a two days bridge of commutative algebra in between Many of the most famous names in these fields took part to the meeting Over 140 participants both attending and contributing the 18 Main Lectures and 64 Communications see list on page xv provided a really wide audience for an Algebra meeting Now that the meeting is over we can say that our initial feeling was right
