**Some natural altered water cycles**

- Water is always moving between its states: gas, liquid, and solid
- Rainwater in any region could be from a distant ocean days before
- River water or aquifer water could be from a fairway high mountaintop
- Natural water cycle is speeding up accordingly with warming temperatures
- Higher evaporation and precipitation rates are not evenly distributed
- Water traditional regions are changing
- Coastal regions are becoming wetter, and the middle of lands are becoming drier
- More evaporation and more rainfall are over oceans, but not necessarily over land
- Alter water cycle is increasing floodings, more extreme drought, stronger hurricanes and stronger heat waves in regions around the world.
