Charge Transfer in Physics, Chemistry and Biology A.M. Kuznetsov, 2020-09-23 This book covers the various processes of charge transfer in physics chemistry and biology and shows the similarities and differences between them It focuses on the physical mechanisms of the elementary processes to demonstrate their common physical nature Organic Charge-transfer Complexes Roy Foster, 1969

**Charge Transfer Reactions in Electrochemical and Chemical Processes** L.I. Krishtalik, 2012-12-06 The mechanism of an elementary act is undoubtedly one of the most fundamental problems of chemical and in particular electro chemical kinetics Although this problem has fascinated scientists for quite a long time it was only in the late fifties and early sixties that it began to be actively investigated for charge transfer reactions Owing to the development of new methods in the analysis of this problem significant advancements were made in theoretical as well as experimental studies These investigations showed that the physical mechanism of charge transfer in all processes including heterogeneous electrochemical and homogeneous chemical and bio chemical processes is basically the same Hence the results obtained in the field of electrochemical kinetics are relevant to the understanding of homogeneous chemical reactions as well This book endeavors to summarize the results of investigations carried out during the last two decades It is based on the author's monograph *Electrode Reactions The Mechanism of an Elementary Act* Nauka 1979 As compared to the first version the book has been considerably revised and enlarged not only to include a large body of data published between 1978 and 1982 but also to analyze in detail the links between electrochemical and homogeneous in particular enzymatic kinetics As a result a new chapter has been added to the book The change in the title reflects the fact that the material contained in the book is not restricted to an investigation of purely electrochemical problems *Charge Transfer Processes in Condensed Media* J. Ulstrup, 2012-12-06 Molecules in liquid and solid media are exposed to strong interaction forces from the surrounding medium The formulation of a comprehensive theory of chemical processes in condensed media is consequently an elaborate task involving concepts from several areas of the natural sciences Within the last two and a half decades very notable results towards the formulation of a unified quantum mechanical theory of such processes have in fact been achieved and by the variety of physical chemical and biological processes which can be suitably covered by this framework the new theory represents an adequate alternative to the transition state theory The present work has a two fold purpose Firstly to provide a reasonably organized exposition of some basic aspects of these developments This part emphasizes the fundamental similarities between chemical and other kinds of radiationless processes and includes the derivation of the most important rate expressions without resorting to involved mathematical techniques The second major purpose is to illustrate the unified character of the rate theory by analysis of a considerable amount of experimental data from both conventional kinetics and from such untraditional areas as low temperature strongly exothermic and biological processes Particular attention is here given to those systems for which a classical description is inadequate and which

provide a diagnostic distinction between several alternative theoretical approaches Handbook of Chemical Biology of Nucleic Acids Naoki Sugimoto, 2023-07-29 This handbook is the first to comprehensively cover nucleic acids from fundamentals to recent advances and applications It is divided into 10 sections where authors present not only basic knowledge but also recent research Each section consists of extensive review chapters covering the chemistry biology and biophysics of nucleic acids as well as their applications in molecular medicine biotechnology and nanotechnology All sections within this book are Physical Chemistry of Nucleic Acids Section Editor Prof Roland Winter Structural Chemistry of Nucleic Acids Section Editor Prof Janez Plavec Organic Chemistry of Nucleic Acids Section Editor Prof Piet Herdewijin Ligand Chemistry of Nucleic Acids Section Editor Prof Marie Paule Teulade Fichou Nucleic Acids and Gene Expression Section Editor Prof Cynthia Burrows Analytical Methods and Applications of Nucleic Acids Section Editor Prof Chaoyong Yang Nanotechnology and Nanomaterial Biology of Nucleic Acids Section Editor Prof Zhen Xi Nucleic Acids Therapeutics Section Editor Prof Katherine Seley Radtke Biotechnology and Synthetic Biology of Nucleic Acids Section Editor Prof Eriks Rozners Functional Nucleic Acids Section Editor Prof Keith R Fox The handbook is edited by outstanding leaders with contributions written by international renowned experts It is a valuable resource not only for researchers but also graduate students working in areas related to nucleic acids who would like to learn more about their important role and potential applications
