Coded Modulation Techniques For Fading Channels:

Coded-Modulation Techniques for Fading Channels Seyed Hamidreza Jamali, Tho Le-Ngoc, 2012-12-06 Coded Modulation Techniques for Fading Channels provides the reader with a sound background for the application of bandwidth efficient coded modulation techniques in fading channels. The book systematically presents recent developments in the field which has grown rapidly in recent years and provides a solid frame of reference for further research in this area. During the past decade there has been a proliferation of research in the area of bandwidth efficient coded modulation techniques. The primary advantage of these schemes over modulation schemes employing traditional error correcting codes is their ability to improve the performance of the communication system without bandwidth expansion. This property makes them a suitable choice for channels which are limited in both power and bandwidth. A typical example of such channels is a mobile satellite channel where it is desired to accommodate a large number of users in a given bandwidth with a power which is constrained by the physical size of the satellite and by the vehicle's antenna. Coded Modulation Techniques for Fading Channels is an excellent reference for researchers and practicing engineers and may be used as a text for advanced courses on the subject.

Each chapter focuses on a particular communication technology utilizing turbo codes and they are written by experts who have been working in related areas from around the world. This book is published to celebrate the 10 year anniversary of turbo codes invention by Claude Berrou, Alain Glavieux and Punya Thitimajshima. 1993-2003 As known for more than a decade turbo code is the astonishing error control coding scheme which its performance closes to the Shannon's limit. It has been honored consequently as one of the seventeen great innovations during the first fifty years of information theory foundation. With the amazing performance compared to that of other existing codes turbo codes have been adopted into many communication systems and incorporated with various modern industrial standards. Numerous research works have been reported from universities and advance companies worldwide. Evidently it has successfully revolutionized the digital communications. Turbo code and its successors have been applied in most communications starting from the ground or terrestrial systems of data storage, ADSL modem and fiber optic communications. Subsequently it moves up to the air channel applications by employing to wireless communication systems and then rises up to the space by using in digital video broadcasting and satellite communications. Undoubtedly with the excellent error correction potential it has been

selected to support data transmission in space exploring system as well

Joint Space-Time Coded Modulation and Channel Coding Over Fading Channels with Cochannel Interference, 2003 In this report we study design and evaluate the performance of space time systems over fading wireless channels We present a new method to derive closed form expressions for the exact bit error probability for optimum combining OC Our method differs from previous approaches in that it starts from the decision metrics of OC instead of the moment generating function This approach facilitates obtaining closed form expressions With these expressions for BEP evaluating the performance of OC is easy and accurate We propose a noncoherent detection scheme in which the channel gain of the desired signal is unknown to the receiver The maximum likelihood decision statistic is derived for the detector and its performance is demonstrated by analysis and simulation To reduce the computation complexity of the decision statistic we present a sub optimum decision feedback algorithm for iterative symbol detection We also develop another noncoherent detection scheme where the only required channel information is the channel amplitude of the interference It is shown that when the interference level is high this detection technique can achieve good performance
