By comparing different logistical models, the book offers valuable insights for policymakers, naval strategists, and defense contractors aiming to enhance naval logistics systems and address ongoing debates in defense procurement.

**Environmental Risk Planning and Management** Simon Gerrard, R. Kerry Turner, Ian Bateman, 2001. The assessment and management of risks to human health and the environment has become a topic of increasing importance and presents one of the major challenges to modern society. This comprehensive volume draws together key papers from a range of different perspectives and offers the reader an important insight into the basic principles of environmental risk management. Topics include the background to environmental risk, human health and ecological risk assessment, risk perception and communication, strategic issues in corporate environmental risk and environmental risk and siting hazardous facilities.

**Changing Environments** Dick Morris, 2003-04-11. Are we humans destroying the environments in which we live or is environmental change inevitable and natural? How has the relationship between human societies and environments changed since pre-history? Will human population growth outpace the available resources of land and water? Is global warming and climate change already out of control? What can economic and political models tell us about international development? *Changing Environments* takes a broad interdisciplinary approach to such questions, drawing on ideas from science, technology, social science, and humanities to examine how and why environments change as a result of natural and human-mediated processes. It draws on examples from around the world and includes consideration of the scales of time and space over which changes in our environments occur, the effects on environments that arise from human use of the resources of energy, land, water, and the atmosphere, the role of technology and economics in shaping human actions on our environments, the use and limitations of different models for thinking about environmental change. The book is part of a series entitled *Environment Change: Contest and Response* that forms a large part of an Open University course on environmental matters. The other books in the series are *Understanding Environmental Issues*, *Contested Environments*, and *Environmental Responses*.

**Environment & Planning**, 2010. *Understanding Environmental Issues* Steve Hinchliffe, Andrew Blowers, Joanna R. Freeland, 2003-03-24. *Understanding Environmental Issues* asks: What is meant by the term environment? Why are environmental questions so pressing? and How can we make sense of environmental issues? The book begins with an investigation of an estuary and touches upon the issues of sea level change, overfishing, nuclear waste disposal, and management of biodiversity. Subsequent chapters take the topic of species extinction to introduce the concepts of time, space, values, power, action, and risk uncertainty. Part of the OU Wiley Environment Series.
