Beyond The Desktop:

Beyond the Desktop Metaphor Mary P. Czerwinski, 2007 Leading developers and researchers report on what the next generation of digital work environments may look like analyzing the theory and practice of designing out of the box to facilitate multitasking collaboration and multiple technologies The computer's metaphorical desktop with its onscreen windows and hierarchy of folders is the only digital work environment most users and designers have ever known Yet empirical studies show that the traditional desktop design does not provide sufficient support for today's real life tasks involving collaboration multitasking multiple roles and diverse technologies In *Beyond the Desktop Metaphor* leading researchers and developers consider design approaches for a post desktop future The contributors analyze the limitations of the desktop environment including the built in conflict between access and display the difficulties in managing several tasks simultaneously and the need to coordinate the multiple technologies and information objects laptops PDAs files URLs email that most people use daily and propose novel design solutions that work toward a more integrated digital work environment They describe systems that facilitate access to information including Lifestreams Haystack Task Factory GroupBar and Scalable Fabric and they argue that the organization of work environments should reflect the social context of work They consider the notion of activity as a conceptual tool for designing integrated systems and point to the Kimura and Activity Based Computing systems as examples *Beyond the Desktop Metaphor* is the first systematic overview of state of the art research on integrated digital work environments It provides a glimpse of what the next generation of information technologies for everyday use may look like and it should inspire design solutions for users real world needs

Microtimes ,1999 **Beyond Desktop Management** João Pedro Sousa,David Garlan,2004 Abstract Computers support more and more daily activities for common users and users increasingly take their activities to different locations Rather than being bound to a specific device users would like to take full advantage of the computer systems accessible to them much like they take advantage of the furniture in each physical space However user attention takes a heavy toll when scaling the use of computers to tasks that are constantly interrupted and resumed and that span many locations and long periods In this report we describe an

infrastructure that provides users with easy access to their tasks as a logical unit across multiple devices and over time spans of years The infrastructure handles platform and application heterogeneity as well as dynamic adaptation to resource variations We validate that the infrastructure s overhead is small compared to normal application startup and that the approach scales Systems Analysis and Design George M. Marakas,2001 This text combined with its accompanying Web based pedagogy and content presents a real world environment through integration of computer technology role playing multicriteria peer evaluation and team presentations **PC** ,1989
