Development for High-performance Liquid Chromatography Joseph L. Glajch,Lloyd R. Snyder,1990 This book deals with the use of the computer as an aid in selecting adequate or optimum conditions for a given analytical separation Originally published as Volume 485 of the Journal of Chromatography it has now been reprinted in book form since the information is so

useful that many chromatographers want a copy readily available in the lab An extensive Introduction is added to the book edition This surveys the field and refers to the pages where particular items are discussed in the book The addition of a Glossary of Terms an Author Index and a Subject Index make this book an invaluable source of easily consulted information for the practising chromatographer For the purpose of this book computer assisted method development will be limited to specific procedures which are intended to be used with a computer rather than their manually applied precursors In that sense the subject can be considered to have begun around 1980 The ongoing intense research activity into various forms of computer assisted HPLC method development provides the assurance that this approach can really assist the practical chromatographer working in an industrial laboratory

Chromatographic Retention Indices Věra Pacáková, L. Feltl, 1992 Focusing on the identification of substances on the basis of their retention this volume pays particular attention to methods for attaining optimum conditions in order to obtain reliable values of retention times It features tables which summarize over 1500 values of retention indices
