Kerr, Starr Roxanne Hiltz, 2013-09-03 Computer Mediated Communication Systems Status and Evaluation synthesizes current knowledge about computerized conferencing systems electronic mail and office information communication systems It should be of interest both to students and researchers studying this new form of electronic communication and to organizations that are planning the installation of electronic mail or other computer mediated communication systems and that need to be aware of the information gleaned from the studies presented here The book is organized into four main sections focusing on the following issues 1 What are the important considerations in designing software or choosing a system from the many available options and capabilities 2 What factors determine whether such systems are likely to be accepted or rejected 3 What are the likely impacts of such systems upon the individuals groups and organizations which use them It is not the economic costs and benefits but the social problems and payoffs in the form of enhanced performance and organizational efficiency that should be the main considerations in deciding whether or not to use a computer mediated communication system 4 Given the conditional nature of many of the possible impacts no system should be implemented without formal evaluation and feedback from users to guide the implementation The major kinds of evaluational strategies that have been successfully employed are described in this book **Computer Communication Systems: Data circuits, error detection, data links** Henri J. Nussbaumer, 1990 *Computer communication systems* Henri Nussbaumer, John C. C. Nelson, 1990 **A Scenario for the Implementation of Interactive Computer-communications Systems in the Home** Science Council of Canada. Committee on Computers and Communication, 1979 *Computer Communications and Networks* John R. Freer, 2011-09-30 Computer communications is one of the most rapidly developing technologies and it is a subject with which everyone in the computer systems profession should be familiar Computer communications and networks is an introduction to communications technology and system design for practising and aspiring computer professionals The subject is described from the computer system designer's point of view rather than from the communications engineer's viewpoint The presentation is suitable for introductory reading as well as for reference The emphasis is on practical rather than theoretical aspects and on technology which will become more important in the future The majority of the subject matter applies to civil and military communications but some aspects which are unique to military applications have been included where considered significant Computer communications is a rapidly changing and highly complex subject Sufficient practical knowledge of the subject is not usually gained at university or college but is generally developed over a period of several years by trial and error attending courses reading reference books and journals this book attempts to simplify and speed up the process by bringing together a body of information which is otherwise distributed throughout many books and journals The information is presented in a framework

which makes a wider understanding of the subject possible Basic knowledge of communications is assumed a general familiarity with computer systems is anticipated in later chapters and where relevant theory is explained **Simulation of Computer Communication Systems Computer Communication Systems** Charles H. Sauer, 1983
