Unifying Petri Nets Hartmut Ehrig, Gabriel Juhas, Julia Padberg, Grzegorz Rozenberg, 2003-06-30 Since their introduction nearly 40 years ago research on Petri nets has diverged in many different directions Various classes of Petri net motivated either by theory or applications with its own specific features and methods of analysis have been proposed and studies in depth These successful developments have led to a very heterogeneous landscape of diverse models and this in turn has stimulated research on concepts and approaches that contribute to unifying and structuring the diverse landscape This state of the art survey presents the most relevant approaches to unifying Petri nets in a systematic and coherent way The 14 chapters written by leading researchers are organized in topical sections on application oriented approaches unifying frameworks and theoretical approaches

Mathematical Foundations of Computer Science (Japan), 1972

Mathematical Foundations of Computer Science 1991 Andrzej Tarlecki, 1991 This volume contains the proceedings of the 16th International Symposium on Mathematical Foundations of Computer Science MFCS 91 held in Kazimierz Dolny Poland September 9 13 1991 The series of MFCS symposia organized alternately in Poland and Czechoslovakia since 1972 has a long and well established tradition The purpose of the series is to encourage high quality research in all branches of theoretical computer science and to bring together specialists working actively in the area Principal areas of interest in this symposium include software specification and development parallel and distributed computing logic and semantics of programs algorithms automata and formal languages complexity and computability theory and others The volume contains 5 invited papers by distinguished scientists and 38 contributions selected from a total of 109 submitted papers

Static Analysis Jens Palsberg, 2004-02-02 This book constitutes the refereed proceedings of the 7th International Static Analysis Symposium SAS 2000 held in Santa Barbara CA USA in June July 2000 The 20 revised full papers presented were carefully reviewed and selected from 52 submissions Also included are 2 invited full papers All current aspects of high performance implementation and verification of programming languages are addressed in particular object logics model checking constraint solving abstract interpretation program transformation rewriting confidentiality analysis typed languages unified analysis code optimization termination code specialization and guided abstraction

EUROCODE '90 Gerard Cohen, Pascale Charpin, 1991-07-24 This book presents a selection of the papers presented at EUROCODE 90 the symposium on coding theory held in Udine Italy November 1990 It gives the state of the art on coding in Europe and ranges from theoretical topics like algebraic geometry and combinatorial coding to applications like modulation real space decoding and VLSI implementation The book is divided into eight sections Algebraic codes Combinatorial codes Geometric codes Protection of information Convolutional codes Information theory Modulation Applications of coding Five of the sections are introduced by an invited contribution

Theoretical Aspects of Object-oriented Programming Carl A. Gunter, John C. Mitchell, 1994 Although the theory of object oriented programming languages is far from complete this book brings together the most important contributions to

its development to date focusing in particular on how advances in type systems and semantic models can contribute to new language designs The fifteen chapters are divided into five parts Objects and Subtypes Type Inference Coherence Record Calculi and Inheritance The chapters are organized approximately in order of increasing complexity of the programming language constructs they consider beginning with variations on Pascal and Algol like languages developing the theory of illustrative record object models and concluding with research directions for building a more comprehensive theory of object oriented programming languages Part I discusses the similarities and differences between objects and algebraic style abstract data types and the fundamental concept of a subtype Parts II IV are concerned with the record model of object oriented languages Specifically these chapters discuss static and dynamic semantics of languages with simple object models that include a type or class hierarchy but do not explicitly provide what is often called dynamic binding Part V considers extensions and modifications to record object models moving closer to the full complexity of practical object oriented languages Carl A Gunter is Professor in the Department of Computer and Information Science at the University of Pennsylvania John C Mitchell is Professor in the Department of Computer Science at Stanford University Parallel and Distributed Computing Handbook Albert Y. Zomaya,1996 With over 1 000 pages and a wealth of illustrations and data tables this handbook offers readers the first information source with the scope to encompass the parallel and distributed computing revolution Written by an international team of experts the book summarizes the current state of the art interprets the most promising trends and spotlights commercial applications *Lectures in the Sciences of Complexity* ,1992 *Trees in Algebra and Programming*, CAAP'94 Sophie Tison,1994 This volume contains the papers selected for presentation at the 19th Colloquium on Trees in Algebra and Programming CAAP 94 which was held jointly with the fifth European Symposium on Programming ESOP 94 in Edinburgh in April 1994 Originally this colloquium series was devoted to the algebraic and combinatorial properties of trees and their role in various fields of computer science Taking into account the evolution of computer science CAAP 94 focuses on logical algebraic and combinatorial properties of discrete structures strings trees graphs etc the topics also include applications to computer science provided that algebraic or syntactic methods are involved The volume contains 21 papers selected from 51 submissions as well as two invited papers PUBLISHER S WEBSITE

 Rem,2013-11-11 The innovative progress in the development of large and small scale parallel computing systems and their
 increasing availability have caused a sharp rise in interest in the scientific principles that underlie parallel computation and
 parallel programming The biannual Parallel Architectures and Languages Europe PARLE conferences aim at presenting
 current research material on all aspects of the theory design and application of parallel computing systems and parallel
 processing At the same time the goal of the PARLE conferences is to provide a forum for researchers and practitioners to ex
 change ideas on recent developments and trends in the field of parallel computing and parallel programming The first two
 conferences PARLE 87 and PARLE 89 have succeeded in meeting this goal and made PARLE a conference that is recognized
 worldwide in the field of parallel computation PARLE 91 again offers a wealth of high quality research material for the
 benefit of the scientific community Compared to its predecessors the scope of PARLE 91 has been broadened so as to cover
 the area of parallel algorithms and complexity in addition to the central themes of parallel architectures and languages The
