Multivariable Calculus with Linear Algebra and Series William F. Trench, Bernard Kolman, 2014-05-10 Multivariable Calculus with Linear Algebra and Series presents a modern but not extreme treatment of linear algebra the calculus of several variables and series Topics covered range from vectors and vector spaces to linear matrices and analytic geometry as well as differential calculus of real valued functions Theorems and definitions are included most of which are followed by worked out illustrative examples Comprised of seven chapters this book begins with an introduction to linear equations and matrices including determinants The next chapter deals with vector spaces and linear transformations along with eigenvalues and eigenvectors The discussion then turns to vector analysis and analytic geometry in R^3 curves and surfaces the differential calculus of real valued functions of n variables and vector valued functions as ordered m tuples of real valued functions Integration line surface and multiple integrals is also considered together with Green's and Stokes's theorems and the divergence theorem The final chapter is devoted to infinite sequences infinite series and power series in one variable This monograph is intended for students majoring in science engineering or mathematics

Advanced Calculus Leonard F. Richardson, 2011-02-14 Features an introduction to advanced calculus and

highlights its inherent concepts from linear algebra Advanced Calculus reflects the unifying role of linear algebra in an effort to smooth readers transition to advanced mathematics The book fosters the development of complete theorem proving skills through abundant exercises while also promoting a sound approach to the study The traditional theorems of elementary differential and integral calculus are rigorously established presenting the foundations of calculus in a way that reorients thinking toward modern analysis Following an introduction dedicated to writing proofs the book is divided into three parts Part One explores foundational one variable calculus topics from the viewpoint of linear spaces norms completeness and linear functionals Part Two covers Fourier series and Stieltjes integration which are advanced one variable topics Part Three is dedicated to multivariable advanced calculus including inverse and implicit function theorems and Jacobian theorems for multiple integrals Numerous exercises guide readers through the creation of their own proofs and they also put newly learned methods into practice In addition a Test Yourself section at the end of each chapter consists of short questions that reinforce the understanding of basic concepts and theorems The answers to these questions and other selected exercises can be found at the end of the book along with an appendix that outlines key terms and symbols from set theory Guiding readers from the study of the topology of the real line to the beginning theorems and concepts of graduate analysis Advanced Calculus is an ideal text for courses in advanced calculus and introductory analysis at the upper undergraduate and beginning graduate levels It also serves as a valuable reference for engineers scientists and mathematicians
