Part III — Combinatorics

Based on lectures by B. Bollobás
Notes taken by Dexter Chua

Michaelmas 2017

These notes are not endorsed by the lecturers, and I have modified them (often significantly) after lectures. They are nowhere near accurate representations of what was actually lectured, and in particular, all errors are almost surely mine.

What can one say about a collection of subsets of a finite set satisfying certain conditions in terms of containment, intersection and union? In the past fifty years or so, a good many fundamental results have been proved about such questions; in the course we shall present a selection of these results and their applications, with emphasis on the use of algebraic and probabilistic arguments.

The topics to be covered are likely to include the following:

- The de Bruijn–Erdős theorem and its extensions.
- The Graham–Pollak theorem and its extensions.
- The theorems of Sperner, EKR, LYMB, Katona, Frankl and Füredi.
- Isoperimetric inequalities: Kruskal–Katona, Harper, Bernstein, BTBT, and their applications.
- Correlation inequalities, including those of Harris, van den Berg and Kesten, and the Four Functions Inequality.
- Alon's Combinatorial Nullstellensatz and its applications.
- LLLL and its applications.

Pre-requisites

The main requirement is mathematical maturity, but familiarity with the basic graph theory course in Part II would be helpful.

Combinatorics on Traces Volker Diekert,1990-09-12 The construction of a software system is a task that has to be structured toensure that the software product fulfills all expectations and the process of producing it remains manageable and reliable Mathematical methods including logic algebra and functional calculus are needed to support structuring and provide notations and basic formal concepts for the foundations of software engineering Mathematical methods of programming reflect the need for modularization and abstraction and suggest appropriate goal directed procedures for the construction of software programs This volume contains the proceedings of an International Summer School held at Marktoberdorf in 1990 the 11th in a series on mathematical methods in programming Outstanding scientists contributed papers centered around logical and functional calculi for the specification refinement and verification of programs and program systems and remarkable examples for the formal development of proofs and algorithms are given **Formal Power Series and Algebraic Combinatorics** Daniel Krob,Alexander A. contributions where the best authorities in the world join forces each of them concentrat ing on their own areas of specialization The present three volume Handbook constitutes such a unique collection In these three volumes we present the current state of the art in formal language theory We were most satisfied with the enthusiastic response given to our request for contributions by specialists representing various subfields The need for a Handbook of Formal Languages was in many answers expressed in different ways as an easily accessible his torical reference a general source of information an overall course aid and a compact collection of material for self study We are convinced that the final result will satisfy such various needs The theory of formal languages constitutes the stem or backbone of the field of science now generally known as theoretical computer science   <u>STACS 96</u> Claude Puech,Rüdiger Reischuk,1996-02-14 This book constitutes the refereed proceedings of the 13th Symposium on Theoretical Aspects of Computer Science STACS 96 held in Grenoble France in February 1996 The 52 revised papers presented were selected from a total of 185 submissions also included are three invited papers The volume addresses all current aspects of theoretical computer science and is organized in sections on complexity theory automata theory parallel algorithms learning parallel and distributed systems cryptography logic and database theory algorithms semantics and program verification and communication complexity   **Mathematical Foundations of Computer Science** ,1992   **Annual Symposium on Theoretical Aspects of Computer Science** ,2006   **Machines, Computations, and Universality** ,2004   *Automata, Languages and Programming* ,1995   <u>Trees in Algebra and Programming, CAAP'94</u> Sophie Tison,1994 This volume contains the papers selected for presentation at the 19th Colloquium on Trees in Algebra and Programming CAAP 94 which was held jointly with the fifth European Symposium on Programming ESOP 94 in Edinburgh in April 1994 Originally this colloquium series was devoted to the algebraic and combinatorial properties of trees and their role in various fields of computer science Taking into account the evolution of computer science CAAP 94 focuses on logical algebraic and combinatorial properties of discrete structures strings trees graphs etc the topics also include applications to computer science provided that algebraic or syntactic methods are involved The volume contains 21 papers selected from 51 submissions as well as two invited papers PUBLISHER S WEBSITE   *The Book of Traces* Volker Diekert,Grzegorz Rozenberg,1995 The theory of traces employs techniques and tackles problems from quite diverse areas which include formal language theory combinatorics graph theory algebra logic and the theory of concurrent systems In all these areas the theory of traces has led to interesting problems and significant results It has made an especially big impact in formal language theory and the theory of concurrent systems In both these disciplines it is a well recognized and dynamic research area Within formal language theory it yields the theory of partially commutative monoids and provides an important connection between languages and graphs Within the theory of concurrent systems it provides an important formal framework for the analysis and synthesis of concurrent systems This monograph covers all important research lines of the theory of traces each chapter is devoted to one research line and is written by leading experts The book is organized in such
