Coma Arousal:

Ethical Issues in Clinical Neuropsychology Shane Bush, Michael Drexler, 2002-01-01 Until now there has been no single volume in which a broad and comprehensive scope of ethical questions in neuropsychology is discussed. These editors have sought to fill that gap calling upon leading thinkers in the field of neuropsychology and ethics. *Ethical Issues in Clinical Neuropsychology* affords the seasoned practitioner as well as the beginner a broad sampling of research and commentary on the ethical dilemmas involved in the clinical practice of Neuropsychology. Part 1 presents ethical issues that arise in the provision of neuropsychological services irrespective of setting whereas Part 2 concentrates on the unique ethical challenges that attend practice with specific populations. Each chapter offers a rare view into the actual practice of Neuropsychology and the examples highlight an oft quoted observation at Ethics Committee meetings that good clinical practice is good ethical practice. Carefully crafted vignettes allow the reader to apply these concepts to a myriad of situations confronting practicing clinical neuropsychologists. The discerning reader of *Ethical Issues in Clinical Neuropsychology* should have no difficulty translating between the 1992 and the proposed ethics code. This is a volume that will be a meaningful addition not only to the libraries of graduate students, interns and postdoctoral fellows but also to the reference shelves of established practitioners and those preparing for board certification examinations in neuropsychology. This book will be of interest to neuropsychologists, rehabilitation psychologists, clinical psychologists and ethicists. [Neuropsychological Rehabilitation](#)

Jose Leon-Carrion, 1997-01-16 This definitive work, the combined effort of 30 international contributors, provides in depth discussion of neuropsychological rehabilitation, the consequences of brain injury, fundamentals of recovery, current rehabilitation models and treatment. Remarkable in the depth of its content, this publication reveals the numerous changes that have occurred over the past decade and the new pathways open to treating TBI. Experts from the United States and Europe detail the consolidation of neuropsychological rehabilitation as an interdisciplinary field with strong clinical and applied roots. The material explores the foundations which support and direct treatment and it combines those foundations with a vision of the current state of the most innovative methodologies e.g. gene therapy, post-traumatic sleep disorder, intervention, neural transplants. **Brain Injury Treatment**
