

LABOR & BIRTH PROCESSES

POSITION

POSITION OF THE MOTHER DURING BIRTH

UPRIGHT POSITION

Sitting on a birthing stool or cushion

"ALL FOURS" POSITION

On all fours: putting your weight on your hands & feet

LITHOTOMY POSITION

Supine position with buttocks on the table

LATERAL POSITION

Laying on a side

Frequent changes in position helps with:

- Relieving fatigue
- Increasing comfort
- Improving circulation

POWERS

CONTRACTIONS: PRIMARY & SECONDARY

PRIMARY POWERS

Involuntary uterine contractions
Signals the beginning of labor

DILATION

- Dilation of the cervix is the enlargement or widening of the cervical opening & canal once labor has begun
- Cervix: closed → full dilation (10 cm)
- Pressure from amniotic fluid can also apply force to dilate

EFFACEMENT

- Shortening & thinning of the cervix during the first stage of labor
- Cervix normally:
 - 2 -3 cm long
 - 1 cm thick
- The cervix is "pulled back / thinned out." by a shortening of the uterine muscles

Degree of EFFACEMENT is EXPRESSED in % (0-100%)

FERGUSON REFLEX

- When the stretch receptors release oxytocin, it triggers the maternal urge to bear down

SECONDARY POWERS

Does not affect cervical dilation but helps with expulsion of infant once the cervix is fully dilated

- Voluntary bearing-down efforts by the women once the cervix has dilated
- When the presenting part reaches the pelvic floor, the contractions change in character & become expulsive.
- Laboring women start to feel an involuntary urge to push & she uses secondary powers to aid in the expulsion of the fetus

PSYCHOLOGY

EMOTIONAL RESPONSE

Anxiety can increase pain perception & the need for more medications (analgesia & anesthesia)

Applications Prob Birth Processes:

An Introduction to Stochastic Processes with Applications to Biology Linda J. S. Allen, 2010-12-02 An Introduction to Stochastic Processes with Applications to Biology Second Edition presents the basic theory of stochastic processes necessary in understanding and applying stochastic methods to biological problems in areas such as population growth and extinction drug kinetics two species competition and predation the spread of epidemics and *Elementary Applications of Probability Theory* Henry C. Tuckwell, 2018-02-06 This book provides a clear and straightforward introduction to applications of probability theory with examples given in the biological sciences and engineering The first chapter contains a summary of basic probability theory Chapters two to five deal with random variables and their applications Topics covered include geometric probability estimation of animal and plant populations reliability theory and computer simulation Chapter six contains a lucid account of the convergence of sequences of random variables with emphasis on the central limit theorem and the weak law of numbers The next four chapters introduce random processes including random walks and Markov chains illustrated by examples in population genetics and population growth This edition also includes two chapters which introduce in a manifestly readable fashion the topic of stochastic differential equations and their applications **Theory of Probability** Boris V. Gnedenko, 2018-10-08 This book is the sixth edition of a classic text that was first published in 1950 in the former Soviet Union The clear presentation of the subject and extensive applications supported with real data helped establish the book as a standard for the field To date it has been published into more than ten languages and has gone through five editions The sixth edition is a major revision over the fifth It contains new material and results on the Local Limit Theorem the Integral Law of Large Numbers and Characteristic Functions The new edition retains the feature of developing the subject from intuitive concepts and demonstrating techniques and theory through large numbers of examples The author has for the first time included a brief history of probability and its development Exercise problems and examples have been revised and new ones added **Applications of Semi-Markov Processes to Counter and Reliability Problems** Richard E. Barlow, Stanford University. Applied Mathematics and Statistics Laboratory, 1960 Modern Probability Theory and Its Applications Emanuel Parzen, 1960 Coordination and Cooperation in Complex Adaptive Systems: Theory and Application Xiaojie Chen, Tatsuya Sasaki, Isamu Okada, 2019-07-31 During the past decade plenty of studies have been carried out in the literature to address the coordination and cooperation problems in complex adaptive systems and have continued to grow This Research Topic eBook publishes 14 papers by 39 authors and most of these published papers present current research illustrating the depth and breadth of ongoing work on the coordination and cooperation problems in complex adaptive systems It thus provides a timely discussion for researchers on the hotspots and challenges of the study on coordination and cooperation in theoretical models and applied systems **An Introduction to Probability Theory and Its Applications** William Feller, 1950 **An Introduction to Probability Theory and Its**

Applications, Volume 2 William Feller, 1957 The classic text for understanding complex statistical probability An Introduction to Probability Theory and Its Applications offers comprehensive explanations to complex statistical problems Delving deep into densities and distributions while relating critical formulas processes and approaches this rigorous text provides a solid grounding in probability with practice problems throughout Heavy on application without sacrificing theory the discussion takes the time to explain difficult topics and how to use them This new second edition includes new material related to the substitution of probabilistic arguments for combinatorial artifices as well as new sections on branching processes Markov chains and the DeMoivre Laplace theorem

An Introduction to Probability Theory and Its Applications, Volume 1 William Feller, 1968-01-15 The nature of probability theory The sample space Elements of combinatorial analysis Fluctuations in coin tossing and random walks Combination of events Conditional probability stochastic independence The binomial and the Poisson distributions The Normal approximation to the binomial distribution Unlimited sequences of Bernoulli trials Random variables expectation Laws of large numbers Integral valued variables generating functions Compound distributions Branching processes Recurrent events Renewal theory Random walk and ruin problems Markov chains Algebraic treatment of finite Markov chains The simplest time dependent stochastic processes Answer to problems Index
