Breeding Field Crops John M. Poehlman, 2013-04-17 While preparing the first edition of this textbook I attended an extension short course on writing agricultural publications The message I remember was select your audience and write to it There has never been any doubt about the audience for which this textbook was written the introductory course in crop breeding In addition it has become a widely used reference for the graduate plant breeding student and the practicing plant breeder In its preparation particular attention has been given to advances in plant breeding theory and their utility in plant breeding practice The blend of the theoretical with the practical has set this book apart from other plant breeding textbooks The basic structure and the objectives of the earlier editions remain unchanged These objectives are 1 to review essential features of plant reproduction Mendelian genetic principles and related genetic developments applicable in plant breeding practice 2 to describe and evaluate established and new plant breeding procedures and techniques and 3 to discuss plant breeding objectives with emphasis on the importance of proper choice of objective for achieving success in variety development Because plant breeding activities are normally organized around specific crops there are chapters describing breeding procedures and objectives for the major crop plants the crops were chosen for their economic importance or diversity in breeding systems These chapters provide a broad overview of the kinds of problems with which the breeder must cope

Breeding Field Crops David Allen Sleper,John Milton Poehlman,2006-07-25 Long recognized as the standard work in its field this fifth edition of *Breeding Field Crops* deals with worldwide advances in plant breeding science and practice in recent years Building on the foundations of earlier editions this thoroughly revised volume includes expanded coverage on the role increased knowledge of genetics plays in the development of new crop cultivars and fully explores exciting new developments in molecular biology *Breeding Field Crops* Fifth Edition thoroughly covers the field of plant breeding The latest edition of this venerable text provides a broad overview of the science of plant breeding and provides students and breeders with essential fundamental information along with a review of current breakthroughs and technologies This book will be a valuable source of information for anyone involved in the science of plant breeding for years to come *Breeding Field Crops* V. Iqbal Qureshi,Zahoor Ahmad Dar,Shabir Hussain Wani,2019-02-15 Development of superior crops that have consistent performance in quality and in quantity has not received the same emphasis in the field of genetics and breeding as merited Specialty trait requires special focus to propagate Yet basic germplasm and breeding methodologies optimized to improve crops are often applied in the development of improved specialty types However because of the standards required for

specialty traits methods of development and improvement are usually more complex than those for common commodity crops. The same standards of performance are desired but the genetics of the specialty traits often impose breeding criteria distinct from those of non specialty possessing crops. Specifically quality improvement programs have unique characteristics that require careful handling and monitoring during their development for specific needs. Adding value either via alternative products from the large volumes of grain produced or development of specialty types is of interest to producers and processors. This work assimilates the most topical results about quality improvement with contemporary plant breeding approaches. The objective of this book is to provide a summary of the germplasm methods of development and specific problems involved for quality breeding. In total fourteen chapters written by leading scientists involved in crop improvement research provide comprehensive coverage of the major factors impacting specialty crop improvement.

Breeding, Biotechnology and Seed Production of Field Crops Bidhan Roy, 2013-01-15. In modern days crop improvement is a multidisciplinary division of agriculture. In this book entitled *Breeding Biotechnology and Seed Production of Field Crops* emphasis has been given on principles methods and practices in plant breeding biotechnology in crop improvement and seed production of field crops. The book has been written for all sections of learners educators and staff members of seed industries. Particular importance has been underlined for postgraduate students who specialize in plant breeding and seed science. Each chapter of the book has been designed as per the recommended syllabus of Indian Council of Agricultural Research for the postgraduate students of various Agricultural Universities in our country. This book has been divided into two major parts i Principles of crop breeding and ii Methods and practices of crop improvement and seed production of

individual field crop The book contains total of 18 chapters First three chapters are related to shed light on the basic principles and remaining chapters deal with methods and practices of individual crop for improvement and seed production We hope that the book will be ready to lend a hand to the advanced undergraduate students doing plant breeding in elective postgraduate students who opted plant breeding teachers researchers and staff members of private seed companies of this field of specialization

Genetic Improvement of Field Crops Gustavo A. Slafer, 2021-04-29 Outlining successful breeding techniques to augment the yields of the world's major crops this reference analyzes the physiological and genetic basis for past and potential future increases in crop yields Covering crops with wide differences in morphology photosynthetic rates and nitrogen metabolisms Genetic Improvement of Field Crops investigates the changes produced by breeders in the physiological attributes affecting wheat grain yield and nitrogen content during the last century discusses those crop characteristics of oats that have already been altered or might be manipulated through breeding to further increase yield potential describes several genetic factors responsible for both yield potential and stress resistance in barley offers insights into the relationship between increases in the yield potential and stress tolerance of corn examines the evolution of sunflower crop yields and yield stability and estimates the contribution of improved cultivars evaluates the effects of breeding on tuber characteristics related to the crop growth and yield of the potato elucidates the possibilities for simultaneous improvement of yield and fiber strength in cotton and identifies the features to be considered in the development of high yielding varieties of rice for different agricultural systems Providing nearly 1600 key literature citations allowing further in depth study of particular topics Genetic Improvement of Field Crops is for plant physiologists and breeders crop and agricultural scientists agronomists biochemists geneticists biotechnologists microbiologists and upper level undergraduate and graduate students in these disciplines

Fundamentals of Field Crop Breeding Devendra Kumar Yadava, Harsh Kumar Dikshit, Gyan Prakash Mishra, Shailesh Tripathi, 2022-05-05 This book is an advanced textbook and a reference book for the post graduate plant breeding students and the plant breeders It consolidates fundamental concepts and also the latest advances in plant breeding practices including development in crop genomics It contains crop wise explanation on origin reproduction genetics of yield contributing traits biotic and abiotic stresses nutritional improvement and crop specific plant breeding procedures and techniques The chapters are planned to describe crop focused breeding procedure for the major crop plants as per their economic importance The recent developments in breeding of field crops have been reported The recent progress made in mapping traits of economic importance has been critically reviewed for each crop The progress made in markers assisted selected in few crops has been summarized This book bridges the knowledge gap and bring to the researchers and students information on modern breeding tools for developing biotic and abiotic stress tolerant climate resilient and micronutrient rich varieties of field crops The chapters in book are contributed by experienced Plant Breeders
