Cognition and Personal Structure James Mancuso, Mildred Shaw, 1988-01-20 The 12 chapters in this anthology describe ten different computer programs designed to help quantify the knowledge systems people use as they assimilate different types of information The programs range from one used to analyze the knowledge structures of experts in almost any domain to one which assesses knowledge of the self The work described is clearly state of the art although the focus of the chapters is on the programs in a particular content domain Consequently the book provides a valuable source of information about a particular category of research tool Choice Cognition and Personal Structure describes in detail methods of collection and analysis to be used in the understanding of an individual's belief system or cognitive structures The contents are diverse clear practical and based on current methods The contributors systematically discuss representative data collection methods and analysis procedures that can be used to explore the relationship between personal systems cognition and actions In addition each writer offers readers access to the computer programs that can be used to follow his or her methods for exploring cognitive structures Most of the descriptions in the book are based on role repertory analysis methodology

*Computers As Cognitive Tools* Susanne P. Lajoie, Sharon J. Derry, 2013-05-13 Highlighting and illustrating several important and interesting theoretical trends that have emerged in the continuing development of instructional technology this book's organizational framework is based on the notion of two opposing camps One evolves out of the intelligent tutoring movement which employs artificial intelligence technologies in the service of student modeling and precision diagnosis and the other emerges from a constructivist developmental perspective that promotes exploration and social interaction but tends to reject the methods and goals of the student modelers While the notion of opposing camps tends to create an artificial rift between groups of researchers it represents a conceptual distinction that is inherently more

interesting and informative than the relatively meaningless divide often drawn between intelligent and unintelligent instructional systems. An evident trend is that researchers in both camps view their computer learning environments as cognitive tools that can enhance learning performance and understanding. Cognitive tools are objects provided by the instructional environment that allow students to incorporate new auxiliary methods or symbols into their social problem solving which otherwise would be unavailable. A final section of the book represents researchers who are assimilating and accommodating the wisdom and creativity of their neighbors from both camps perhaps forming the look of technology for the future. When the idea of model tracing in a computer based environment is combined with appreciation for creative mind extension cognitive tools and for how a community of learners can facilitate learning a camp is created where AI technologists and social constructivist learning theorists can feel equally at home.

Empirical Foundations of Information and Software Science V Pranas Zunde, D. Hocking, 2012-12-06 This is the proceedings of the Sixth Symposium on Empirical Foundations of Information and Software Sciences EFISS which was held in Atlanta Georgia on October 19-21 1988. The purpose of the symposia is to explore subjects and methods of scientific inquiry which are of common interest to information and software sciences and to identify directions of research that would benefit from the mutual interaction of these two disciplines. The main theme of the sixth symposium was modeling in information and software engineering with emphasis on methods and tools of modeling. The symposium covered topics such as models of individual and organizational users of information systems, methods of selecting appropriate types of models for a given type of users and a given type of tasks, deriving models from records of system usage, modeling system evolution, constructing user and task models for adaptive systems and models of system architectures. This symposium was sponsored by the School of Information and Computer Science of the Georgia Institute of Technology and by the U S Army Institute for Research in Management Information Communications and Computer Sciences AIRMICS 171e. **Cognitive Science** Marlin L. Languis, James Buffer, Daniel Martin, Paul Naour, 2012-05-04 This volume brings together theory, research and development in cognitive neuroscience. It investigates the neural processes involved in cognition and learning using developments in computer technology to study the brain in action and other topographic brain mapping. Electrical activity patterns of the brain in the learning processes are displayed through these techniques. Part 1 delineates neuroscience.
