Artificial Intelligence in Education Ben Du Boulay,R. Mizoguchi,1997 The theme of this book is Knowledge and Media in Learning Systems and papers that explore the emerging roles of intelligent multimedia and distributed technologies as well as computer supported collaboration within that theme are included The spread of topics is very wide encompassing both well established areas such as student modelling as well as more novel topics such as distributed intelligent tutoring on the World Wide Web Far from undermining the need to understand how learning and teaching interact the newer media continue to emphasise the interdependence of these two processes Collaboration and tools for collaboration are the major topics of interest Understanding how human learners collaborate how peer tutoring works and how the computer can play a useful role as either a more able or even a less able learning partner are all explored here

Knowledge-based Systems for General Reference Work John V. Richardson, 1995 By focusing on knowledge based systems technology the primary purpose and goal of this book is to improve the quality of reference service rendered in libraries Within reference service this book examines question answering a complex and difficult task For those interested in the theoretical aspects of reference work they have to look no further than the first chapter In addition the book features theoretical chapters on modelling the reference transaction a chapter on the logic of ready reference work and a chapter on the appropriate criteria to apply in selecting an expert system shell Several practical chapters focus on what KBS work has already been done in the field and evaluate nearly fifty expert system development shells so that readers can select the most appropriate shell for their domain The subtitle of the book is applications problems and progress in regard to expert systems in reference work Applications are covered most clearly in chapter 8 which reviews the more than extant prototypes Chapter 3 covers what is feasible chapter 4 models the reference transaction and chapter 7 covers interface issues so that future applications can be more successful Problems are covered throughout the book starting with chapter 1 which discusses the traditional emphasis on reference sources It argues that the field needs to shift toward procedural knowledge related to work in reference departments The chapter on expert system feasibility reveals that there are alternative ways of conceptualizing the intellectual work of an expert and of course chapter 9 directly points out limitations in extant systems Encouraging words occur in chapter 1 about the shift to a balanced or complete paradigm for doing reference work Similarly the chapter on modelling is optimistic in that reference work can be modelled and systems implemented which act like human experts The final chapter tries to avoid the technological optimism inherent in many books on expert systems by identifying the near term factors which will influence the development of expert systems Key Features Historical background presenting the field's paradigmatic thinking Decision trees for basic formats of reference material Flowchart modelling the reference transaction Reviews of more than fifty extant KBS in general reference environments Evaluative criteria on more than forty expert system shells

Whitaker's Book List, 1989 Developing Paradigms for Self-directed Learning, 1998 Human-computer Interaction--INTERACT '90 Dan Diaper, 1990 The past decade has seen the growth and diffusion of information technology exceeding most predictions even those of many optimistic researchers At the same time there has also been a substantial increase in concern for the human aspects of computing and information technology systems Brought together in this book are 150 papers presenting discussing and

surveying recent research into Human Computer Interaction Included are a number of case studies describing a wide range of applications and projects COMPUTERS IN HUMANBEHAVIOR Robert D. Tennyson,2000 *Psychology of Programming* Jean-Michel Hoc,1990 Psychology provides a backdrop for most of the study of human b1computer interaction In this volume the psychological issues that pertain to programming rather than systems design are examined in four sections Theoretical and Methodological Issues Language Design and Skill Acquisition Expert Programming and the Future The book was inspired by working groups in France and the United Kingdom but also includes work by major North American figures such as Curtis and Soloway It is the first comprehensive work on this topic since the early 1980s Asking Questions with Computers Sue Ellen Hansen,2000
