Active Learning to Minimize the Possible Risk of Future Epidemics KC Santosh, Suprim Nakarmi, 2023-11-22

Future epidemics are inevitable and it takes months and even years to collect fully annotated data. The sheer magnitude of data required for machine learning algorithms spanning both shallow and deep structures raises a fundamental question: how big data is big enough to effectively tackle future epidemics. In this context, active learning, often referred to as human or expert in the loop learning, becomes imperative, enabling machines to commence learning from day one with minimal labeled data. In unsupervised learning, the focus shifts toward constructing advanced machine learning models like deep structured networks that autonomously learn over time with human or expert intervention only when errors occur and for limited data a process we term mentoring. In the context of Covid 19, this book explores the use of deep features to classify data into two clusters: 0 (Covid 19) and 1 (non Covid 19) across three distinct datasets: cough sound, Computed Tomography (CT) scan, and chest x-ray (CXR). Not to be confused, our primary objective is to provide a strong assertion on how active learning could potentially be used to predict disease from any upcoming epidemics. Active Learning Charles C. Bonwell, James A. Eison, 1991-02-14. This monograph examines the nature of active learning at the higher education level, the empirical research on its use, the common obstacles and barriers that give rise to faculty resistance, and how faculty and staff can implement active learning techniques. A preliminary section defines active learning and looks at the current climate surrounding the concept. A second section, entitled "The Modified Lecture," offers ways that teachers can incorporate active learning into their most frequently used format, the lecture. The following section on classroom discussion explains the conditions and techniques needed for the most useful type of exchange. Other ways to promote active learning are also described, including visual learning, writing in class, problem solving, computer-based instruction, cooperative learning, debates, drama, role playing, simulations, games, and peer teaching. A section on obstacles to implementing active learning techniques leads naturally to the final section, "Conclusions and Recommendations," which outlines the roles that each group within the university can play in order to encourage the implementation of active learning strategies. The text includes over 200 references and an index. JB

Deep Active Learning Kayo Matsushita, 2017-09-12. This is the first book to connect the concepts of active learning and deep learning and to delineate theory and practice through collaboration between scholars in higher education from three countries: Japan, the United States, and Sweden, as well as different subject areas: education, psychology, learning science, teacher training, dentistry, and business. It is only since the beginning of the twenty-first century that active learning has become key to the shift from teaching to learning in Japanese higher education. However, active learning in Japan, as in many other countries, is just an umbrella term for teaching methods that promote students' active participation, such as group work, discussions, presentations, and so on. What is needed for students is not just active learning but deep active learning. Deep learning focuses on content and quality of learning, whereas active learning, especially in Japan, focuses on methods of learning. Deep active learning is placed at the intersection of active learning and deep learning, referring to learning that engages students with the world as an object of learning while

interacting with others and helps the students connect what they are learning with their previous knowledge and experiences as well as their future lives. What curricula, pedagogies, assessments, and learning environments facilitate such deep active learning? This book attempts to respond to that question by linking theory with practice. **Effective Use of Active**

Learning Applications Meryem Nur Aydede Yalçın, 2020-01-20. In modern education, approach development in the modern science and technology is directly related with the getting a success on the science education is accepted. So all societies should be able to develop, understand and use the technology and each person in the society should be literate of the science in today's world. Therefore, learners of educational institutions/organizations should be grown having specific features like problem solving skills, critical thinking, creativity, independence, self-confidence, abilities. As a result, having these skills and abilities depend on to have a learning process which have developed perfectly. In science education, instead of teacher centered methodologies, learner centered ones should be included. This idea refers to active learning. The idea is to bring together the international group to share experiences and work together in the field of effective use of active learning applications in science education. Handbook of Research on Educational Technology Integration and Active Learning Keengwe,

Jared, 2015-05-31. As today's teachers prepare to instruct a new generation of students, the question is no longer whether technology should be integrated into the classroom, but only how. Forced to combat shorter attention spans and an excess of stimuli, teachers sometimes see technology as a threat rather than a potential enhancement to traditional teaching methods. The Handbook of Research on Educational Technology Integration and Active Learning explores the need for new professional development opportunities for teachers and educators as they utilize emerging technologies to enhance the learning experience. Highlighting the advancements of ubiquitous computing, authentic learning, and student centered instruction, this book is an essential reference source for educators, academics, students, researchers, and librarians. Active Learning in Secondary and College Science Classrooms A Working Model for Helping the Learner to Learn is motivated by fundamental changes in education in response to perceptions that students are not adequately acquiring the knowledge and skills necessary to meet current educational and economic goals The premise of this book is that active learning offers a highly effective approach to meeting the mandate for increased student knowledge skills and performance It is a valuable resource for all teacher trainers in science education and high school and college science teachers

A Guide to Teaching in the Active Learning Classroom Paul Baepler,J. D. Walker,D. Christopher Brooks,Kem Saichaie,Christina I. Petersen,2023-07-03 While Active Learning Classrooms or ALCs offer rich new environments for learning they present many new challenges to faculty because among other things they eliminate the room s central focal point and disrupt the conventional seating plan to which faculty and students have become accustomed The importance of learning how to use these classrooms well and to capitalize on their special features is paramount The potential they represent can be realized only when they facilitate improved learning outcomes and engage students in the learning process in a manner different from traditional classrooms and lecture halls This book provides an introduction to ALCs briefly covering their history and then synthesizing the research on these spaces to provide faculty with empirically based practical guidance on how to use these unfamiliar spaces effectively Among the questions this book

addresses are How can instructors mitigate the apparent lack of a central focal point in the space What types of learning activities work well in the ALCs and take advantage of the affordances of the room How can teachers address familiar classroom management challenges in these unfamiliar spaces If assessment and rapid feedback are critical in active learning how do they work in a room filled with circular tables and no central focus point How do instructors balance group learning with the needs of the larger class How can students be held accountable when many will necessarily have their backs facing the instructor How can instructors evaluate the effectiveness of their teaching in these spaces This book is intended for faculty preparing to teach in or already working in this new classroom environment for administrators planning to create ALCs or experimenting with provisionally designed rooms and for faculty developers helping teachers transition to using these new spaces

Active Learning in College Science Joel J. Mintzes, Emily M. Walter, 2020-02-23 This book explores evidence based practice in college science teaching It is grounded in disciplinary education research by practicing scientists who have chosen to take Wieman s 2014 challenge seriously and to investigate claims about the efficacy of alternative strategies in college science teaching In editing this book we have chosen to showcase outstanding cases of exemplary practice supported by solid evidence and to include practitioners who offer models of teaching and learning that meet the high standards of the scientific disciplines Our intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek models of excellence Our primary audience consists of the thousands of dedicated faculty and graduate students who teach undergraduate science at community and technical colleges 4 year liberal arts institutions comprehensive regional campuses and flagship research universities In keeping with Wieman s challenge our primary focus has been on identifying classroom practices that encourage and support meaningful learning and conceptual understanding in the natural sciences The content is structured as follows after an Introduction based on Constructivist Learning Theory Section I the practices we explore are Eliciting Ideas and Encouraging Reflection Section II Using Clickers to Engage Students Section III Supporting Peer Interaction through Small Group Activities Section IV Restructuring Curriculum and Instruction Section V Rethinking the Physical Environment Section VI Enhancing Understanding with Technology Section VII and Assessing Understanding Section VIII The book s final section IX is devoted to Professional Issues facing college and university faculty who choose to adopt active learning in their courses The common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events Many of the strategies we highlight emerge from a constructivist view of learning that has gained widespread acceptance in recent years In this view learners make sense of the world by forging connections between new ideas and those that are part of their existing knowledge base For most students that knowledge base is riddled with a host of naive notions misconceptions and alternative conceptions they have acquired throughout their lives To a considerable extent the job of the teacher is to coax out these ideas to help students understand how their ideas differ from the

scientifically accepted view to assist as students restructure and reconcile their newly acquired knowledge and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances Clearly this prescription demands far more than most college and university scientists have been prepared for
