Active Spring Period:

Seasonality of Freshwater Phytoplankton M. Munawar, J.F. Talling, 2012-12-06 This volume originated in a belief shared by the two editors that the time was ripe for a world wide survey or at least sampling of seasonality in freshwater phytoplankton An opportunity was provided by the International Limnological Congress S I L held at Lyon in August 1983 to plan a one day symposium on the topic From this enjoyable and successful occasion augmented by additional written contributions the present volume has emerged As convenors and editors we are grateful to the contributors for their cooperation in this international venture The seasonality of phytoplankton is widely conditioned by that of climate Thus one may expect to find the geographical differentiation of climatic patterns reflected in the seasonal patterns of algal occurrence Diversity in the global perspective is also introduced by considerations of geomorphology geochemistry and genotypically determined response Nevertheless the historical base of our subject is firmly rooted in the north temperate zone From its fresh waters and seas there have evolved virtually all of the approaches and techniques now being applied to the analysis of phytoplankton seasonal dynamics

Qinling Mountains of Shaanxi Province This project was the first Chinese led conservation project in China and was conducted during a significant transition period in Chinese history as the country opened its society and science to the world The project focused on behavioral observation of wild giant pandas but evolved to include physiology nutrition ecology land use policy and population biology as the staff became more aware that the issues with captive pandas assisted reproduction unusual diet and genetic inbreeding were not the most critical to survival of wild populations It is evident in this work that as the scientists gained knowledge they came to see giant panda conservation as wrapped in landscape ecology and human wildlife interactions The group was seminal in the Chinese government s enactment of a logging ban to their study area by advocating for pandas at the national level The project was summarized in a 2001 volume but its publication in Mandarin limited its influence on the greater conservation community This English version of the original work translates condenses and refines the original volume with added contextual chapters on the importance of this volume and how our understanding of giant panda conservation is shaped by this pioneering field work
