Design For Manufacturing A Structured Approach:

Design for Manufacturing Corrado Poli, 2001-11-29 Design for Manufacturing assists anyone not familiar with various manufacturing processes in better visualizing and understanding the relationship between part design and the ease or difficulty of producing the part. Decisions made during the early conceptual stages of design have a great effect on subsequent stages. In fact quite often more than 70% of the manufacturing cost of a product is determined at this conceptual stage yet manufacturing is not involved. Through this book designers will gain insight that will allow them to assess the impact of their proposed design on manufacturing difficulty. The vast majority of components found in commercial batch manufactured products such as appliances, computers and office automation equipment are either injection molded, stamped, die cast or occasionally forged. This book emphasizes these particular most commonly implemented processes. In addition to chapters on these processes, the book touches upon material process selection, general guidelines for determining whether several components should be combined into a single component or not, communications, the physical and mechanical properties of materials, tolerances and inspection and quality control. In developing the DFM methods presented in this book, he has worked with over 30 firms specializing in injection molding, die casting, forging and stamping. Implements a philosophy which allows for easier and more economic production of designs. Educates designers about manufacturing. Emphasizes the four major manufacturing processes. Manufacturing Processes for Engineering Materials Serope Kalpakjian, Steven R. Schmid, 2008 This comprehensive up to date text has balance coverage of the fundamentals of materials and processes, its analytical approaches and its applications in manufacturing engineering. **Journal of Design and Manufacturing**, 1991 *Product Development* Anil Mital, Anoop Desai, Anand Subramanian, Aashi Mital, 2014-08-12 Product development teams are composed of an integrated group of professionals working from the nascent stage of new product planning through design creation and design review and then on to manufacturing planning and cost accounting. An increasingly large number of graduate and professional training programs are aimed at meeting that need by creating a better understanding of how to integrate and accelerate the entire product development process. This book is the perfect accompaniment and a comprehensive guide. The second edition of this instructional reference work presents invaluable insight into the concurrent nature of the multidisciplinary product development process. It can be used in the traditional classroom, in professional continuing education courses or for self study. This book has a ready audience among graduate students in mechanical and industrial engineering as well as in many MBA programs focused on manufacturing management. This is a global need that will find a receptive readership in the industrialized world, particularly in the rapidly developing industrial economies of South Asia and Southeast Asia. Reviews the precepts of Product design in a step by step structured process and focuses on the concurrent nature of product design. Helps the reader to understand the connection between initial design and interim and final design including design review and

materials selection Offers insight into roles played by product functionality ease of assembly maintenance and durability and their interaction with cost estimation and manufacturability through the application of design principles to actual products

The Business of Shipbuilding George Bruce,Ian Garrard,2013-12-04 The Business of Shipbuilding thoroughly analyses vessel construction from material receipt and preparation to final outfitting It explains the central role of computer technology in the design process the growing importance of supply chain management for materials and services and the use of subcontractors Methods of measuring progress productivity performance and the need for enforcing standards during construction are also discussed Through the use of practical examples The Business of Shipbuilding explains the structure of shipbuilding in Japan Korea the European Union China Eastern Europe and the Americas and places this in the context of the economic and political climate of each region Written in a clear and concise style and illustrated throughout with diagrams charts and plans The Business of Shipbuilding will be an invaluable reference tool both for experienced shipbuilders and for shipowners managers operators brokers insurers lawyers universities surveyors and equipment suppliers

A Cost Effective Use of Computer Aided Technologies and Integration Methods in Small and Medium Sized Companies Peter Kopacek,2014-05-23 The objective of this 1st Workshop was to bring together end users manufacturers and computer control specialists to evaluate possibilities in the important field of factory automation This volume offers solutions for product process design production design and control Technical criteria are also discussed and economic justification methods are evaluated The papers included present intelligent modular low cost approaches or solutions appropriate for small and medium sized companies which might benefit from improved efficiency and competitiveness

Product Development

,2008 Design and manufacture of new products has always been a team effort but lately the team has been expanding No longer can companies afford to keep the product design team working in isolation from the production and manufacturing team not to mention the financial and accounting team For today s product development team has to comprise an integrated group of professionals working from the very beginning of new product planning on through design creation and design review and then on to manufacturing planning and cost accounting Even when a product is conceived and goes into preliminary design thought must be given to how easily or not it will be manufactured how difficult or not it will be to assemble and disassemble for the end use customer and how much it will cost in materials production and maintenance This new book will guide both engineering professionals as well as graduate level students in mechanical and industrial engineering and general manufacturing management in how to develop such a holistic integrated team approach to product development Written by leading academic authorities who also have extensive industrial experience this instructional reference work can be used in the traditional classroom in professional continuing education courses or for self study First text reference to cover product development from initial product concept and engineering design to design specs manufacturability and product marketing Reviews the precepts of Product design in a step by step structured process Helps

the reader to understand the connection between initial design and interim and final design including design review and materials selection Offers insight into roles played by product functionality ease of assembly maintenance and durability and their interaction with cost estimation and manufacturability Handbook of Design, Manufacturing and Automation Richard C. Dorf, Andrew Kusiak, 1994 Comprehensive detailed and organized for speedy reference everything you need to know about modern manufacturing technology From concurrent engineering to fixture design for machining systems from robotics and artificial intelligence to facility layout planning and automated CAD based inspection this handbook provides all the information you need to design plan and implement a modern efficient manufacturing system tailored to your company's special needs and requirements Handbook of Design Manufacturing and Automation does more than simply present the characteristics and specifications of each technology much more Each technology is discussed both in terms of its own capabilities and in terms of its compatibility with other technologies and the trade offs involved in choosing one option over another are explored at length An entire section is devoted to the business aspects of converting to the new technologies including acquisition of automation managing advanced manufacturing technology and issues of cost and financing The focus is on incorporating these technologies into a cohesive whole an efficient cost effective manufacturing system Other important topics include Design for automated manufacturing Nontraditional manufacturing processes Machine tool programming techniques and trends Precision engineering and micromanufacturing Computer integrated product planning and control Image processing for manufacturing And much more CIRP Journal of Manufacturing Systems ,2000 Proceedings of the 36th International MATADOR Conference Srichand Hinduja, Lin Li, 2010-08-05 Presented here are 130 refereed papers given at the 36th MATADOR Conference held at The University of Manchester in July 2010 The MATADOR series of conferences covers the topics of Manufacturing Automation and Systems Technology Applications Design Organisation and Management and Research The proceedings of this Conference contain original papers contributed by researchers from many countries on different continents The papers cover the principles techniques and applications in aerospace automotive biomedical energy consumable goods and process industries The papers in this volume reflect the importance of manufacturing to international wealth creation the emerging fields of micro and nano manufacture the increasing trend towards the fabrication of parts using lasers the growing demand for precision engineering and part inspection techniques and the changing trends in manufacturing within a global environment Information Infrastructure Systems for Manufacturing Hiroyuki Yoshikawa, Jan Goossenaerts, 1993 The possible benefits the external characteristics and the broad range requirements of information infrastructure systems for intelligent manufacturing systems are widely known However it is recognized that various problems are impeding achievement in this area including the lack of understanding and agreement about techniques and methods for coordinating and systematizing the broad range information processing requirements and for synthesizing these requirements into deeply structured easily adaptable and comprehensive conceptual

models This hampers the development of information infrastructures amalgamating the conceptual models and computing communication storage technologies and the development of intelligent manufacturing systems amalgamating the information infrastructures with advanced machine tools and skillful people This publication elaborates on these issues and affords a greater understanding of and agreement about methods techniques and tools for solving related problems To ensure an in depth coverage of the wide problem domain contributions sourced from reknowned experts are focused on some of the most relevant research and development issues The book will provide a useful foundation of information for further research and development on information infrastructure systems for manufacturing
