Change Point Analysis Baisuo Jin, Jialiang Li, 2025-08-29 Change point analysis is a crucial statistical technique for detecting structural breaks within datasets applicable in diverse fields such as finance and weather forecasting. The authors of this book aim to consolidate recent advancements and broaden the scope beyond traditional time series applications to include biostatistics, longitudinal data analysis, high dimensional data, and network analysis. The book introduces foundational concepts with practical data examples from literature alongside discussions of related machine learning topics. Subsequent chapters focus on mathematical tools for single and multiple change point detection along with statistical inference issues which provide rigorous proofs to enhance understanding but assume readers have foundational knowledge in graduate level probability and statistics. The book also expands the discussion into threshold regression frameworks linked to subgroup identification in modern statistical learning and apply change point analysis to functional data and dynamic networks areas not comprehensively covered elsewhere.

**Key Features:** Comprehensive Coverage of Diverse Applications. This book expands the scope of change point analysis to include biostatistics, longitudinal data, high dimensional data, and network analysis. This broad applicability makes it a valuable resource for researchers and students across various disciplines.

**Integration of Theory and Practice:** The book balances rigorous mathematical theory with practical applications by providing extensive computational examples using R. Each chapter features real world data illustrations and discussions of relevant machine learning topics ensuring that readers can see the relevance of theoretical concepts in applied settings.

**Accessibility for Students:** The content is designed with graduate level students in mind providing clear explanations and structured guidance through complex mathematical tools. Rigorous proofs are included to facilitate understanding without overwhelming readers with overly advanced theories early on. The book incorporates computational results using R showcasing various packages tailored for specific methods or problem domains while providing references for further exploration. By offering a selection of widely adopted methodologies relevant in scientific research as well as business contexts, this text aims to equip junior researchers with essential tools needed for their work in change point analysis.

**Leveraging Phenotyping and Crop Modeling in Smart Agriculture** Ting Sun, Wenyu Zhang, Syed Tahir Ata-Ul-Karim, Yuntao Ma, LiuJun Xiao, 2025-08-20 In recent years the agriculture sector has witnessed a significant transformation due to the integration of digital technologies and data driven methodologies leading to the emergence of smart agriculture. Advanced agricultural technologies notably high throughput phenotyping and crop modeling have fundamentally altered our understanding and management of crops. Phenotyping allows for precise characterization of plant traits while crop modeling provides predictive insights into crop growth and yield based on a diverse set of environmental parameters. In many contexts phenotyping and modeling are closely intertwined phenotypic data forms the foundation for modeling and models offer quantifiable tools for analyzing complex traits. The convergence of these

domains presents an exciting opportunity to optimize agricultural practices enhance resource efficiency and make substantial contributions to global food security This research topic aims to seamlessly integrate phenotyping and modeling essential components in smart agriculture to address urgent challenges like sustainable food production amidst a growing global population and to optimize resource utilization The key challenge is the fragmented use and insufficient integration of high throughput phenotyping and advanced crop modeling The cohesive fusion of these technologies can revolutionize crop management offering predictive analytics for optimized resource allocation enhanced productivity and environmental sustainability Recent strides in sensor tech machine learning and computational modeling provide a strong foundation for a refined integration of phenotyping and modeling enabling real time data driven decisions for farmers This research strives to bridge the gap between phenotyping and crop modeling aiming for a transformative approach in smart agriculture to ensure sustainability and food security
